

# 2020 Storage Management Plan Development Workshop 2

## Takeaways

- Parties expressed the need of storage for local use and for S & R Programs
- Based on the parties' planning projections and use of storage, the maximum accumulation of water in storage is estimated at 700 TAF for local use (ECO, Supplemental, Recycled, etc.)
- The Storage Framework Investigation (SFI) analyzed effects of storing water at different levels on top of the 700 TAF projection for S & R Programs
- The SFI concluded that for S & R Programs beyond 800 TAF, new facilities will be required
