CALL TO ORDER

Chair Pierson called the Advisory Committee meeting to order at 9:00 a.m.

AGENDA – ADDITIONS/REORDER

None

I. CONSENT CALENDAR

A. MINUTES

Approve as presented:

1. Minutes of the Advisory Committee Meeting held August 16, 2018

B. FINANCIAL REPORTS

Receive and file as presented:

1. Cash Disbursements for the month of July 2018
2. Watermaster VISA Check Detail for the month of July 2018
3. Combining Schedule for the Period July 1, 2018 through July 31, 2018
4. Treasurer’s Report of Financial Affairs for the Period July 1, 2018 through July 31, 2018
5. Budget vs. Actual Report for the Period July 1, 2018 through July 31, 2018

C. OBMP SEMI-ANNUAL STATUS REPORT 2018-1

Recommend to the Watermaster Board to adopt the Semi-Annual OBMP Status Report 2018-1, along with filing a copy with the Court, subject to any necessary non-substantive changes.

D. WATER TRANSACTIONS

Provide advice and assistance to the Watermaster Board on the proposed transaction:

The purchase of 500.000 acre-feet of water from West Valley Water District by Cucamonga Valley Water District. This purchase is made from West Valley Water District’s Excess Carryover Account. Date of application: July 11, 2018.

(0:01:00)

Motion by Ms. Rosemary Hoerning, seconded by Ms. Teri Layton and by unanimous vote

Moved to approve the Consent Calendar as presented.

II. BUSINESS ITEMS

A. FISCAL YEAR 2018/19 BUDGET TRANSFER (FORM T-18-07-01)

Approve Fiscal Year 2018/19 Budget Transfer (Form T-18-07-01) as presented.

(0:01:26) Mr. Joswiak gave a report and offered the same presentation as was given at the Pool meetings last week. The Committee declined to have the presentation provided again.

(0:02:18)

Motion by Mr. Van Jew, seconded by Mr. Brian Geye and by unanimous vote

Moved to approve Business Item II.A. as presented.

B. 2018 RECHARGE MASTER PLAN UPDATE AND RESOLUTION NO. 2018-04

Recommend to the Watermaster Board to approve the 2018 RMPU as presented and adopt Resolution No. 2018-04.

(0:02:43) Mr. Kavounas gave a report. A discussion ensued.

(0:05:41)

Motion by Ms. Rosemary Hoerning, seconded by Ms. Teri Layton and by unanimous vote

Moved to approve Business Item II.B. as presented.

C. TASK ORDER NO. 4 UNDER MASTER AGREEMENT FOR COLLABORATIVE PROJECTS: CHINO BASIN CONJUNCTIVE USE ENVIRONMENTAL WATER STORAGE/EXCHANGE PROGRAM EVALUATION AND CONCEPTUAL DESIGN SUPPORT

Approve Task Order No. 4 Under Master Agreement for Collaborative Projects: Chino Basin Conjunctive Use Environmental Water Storage/Exchange Program Evaluation and Conceptual Design Support.

(0:06:05) Mr. Kavounas gave a report.

(0:06:32)

Motion by Vice-Chair Todd Corbin, seconded by Mr. Cris Fealy and by unanimous vote

Moved to approve Business Item II.C. as presented.

D. SAFE YIELD RESET-RELATED AGREEMENT DISCUSSION

Discussion.

(0:06:50) Mr. Kavounas gave an introduction to Business Item II.D. A discussion ensued

III. REPORTS/UPDATES

A. LEGAL COUNSEL REPORT

1. Appeal of April 28, 2017 Order
2. August 24, 2018 Hearing

(0:09:52) Mr. Herrema offered the same reports as was given at the Pool meetings last week. The Committee declined to have the reports provided again.

B. ENGINEER REPORT

1. Storage Framework
2. Fiscal Year 2017/18 GLMC Annual Report

(0:10:23) Mr. Malone gave a report.

C. CFO REPORT

None

D. GM REPORT

1. Proposed Changes to DYY Program Operation
2. CDA Production
3. Changes to the Overlying (Non-Agricultural) Pool Pooling Plan
4. Other

(0:11:24) Mr. Kavounas announced that the GM's Report is unchanged since the Pool meetings last week. He made an announcement for parties to "Save The Date" of Tuesday, December 4, 2018 for the 40th Judgment Anniversary Commemoration event.

(0:12:04) Mr. Tellez Foster announced that the Inland Empire Utilities Agency Board approved the RMPU 2018 update and awarded the contract for Pomona Extensometer.

(0:12:46) Mr. Geye made comments regarding Item III.D.3., Changes to the Overlying (Non-Agricultural) Pool Pooling Plan.

E. INLAND EMPIRE UTILITIES AGENCY

1. MWD Update (Written)
2. State and Federal Legislative Reports (Written)
3. Community Outreach/Public Relations Report (Written)

(0:17:58) Mr. Berch gave a report on the Prop 1 status and a presentation on the Rialto Pipeline. A discussion ensued.

F. OTHER METROPOLITAN MEMBER AGENCY REPORTS

None

IV. INFORMATION

1. Cash Disbursements for August 2018

V. COMMITTEE MEMBER COMMENTS

(0:17:22) Ms. Layton introduced Mr. Brian Lee as San Antonio Water Company's new General Manager.

STAFF REPORT

DATE: October 18, 2018
TO: Advisory Committee
SUBJECT: VISA Check Detail Report - Financial Report B2 (August 31, 2018)

SUMMARY

Issue: Record of VISA credit card payment disbursed for the month of August 2018.

Recommendation: Receive and file VISA Check Detail Report for August 2018 as presented.

Financial Impact: Funds disbursed were included in the FY 2018/19 "Amended" Watermaster Budget.

Future Consideration

Advisory Committee – October 18, 2018: Receive and File

Watermaster Board – October 25, 2018: Receive and File (Normal Course of Business)

ACTIONS:

Appropriative Pool – October 11, 2018: Received and filed

Non-Agricultural Pool – October 11, 2018: Moved unanimously to receive and file, without approval

Agricultural Pool – October 11, 2018: Received and filed

Advisory Committee – October 18, 2018:

Watermaster Board – October 25, 2018:

BACKGROUND

A monthly VISA Check Detail report is provided to keep all members apprised of Watermaster expenditures charged against the General Manager and Chief Financial Officer's Bank of America VISA card.

DISCUSSION

The total cash disbursements during the month of August 2018 was \$5,771.70. The payment was processed in the amount of \$5,771.70 (by check number 20955 dated August 14, 2018). The monthly charges for August 2018 of \$5,771.70 were for routine and customary expenditures and properly documented with receipts.

STAFF REPORT

DATE: October 18, 2018
TO: Advisory Committee
SUBJECT: Treasurer's Report of Financial Affairs for the Period August 1, 2018 through August 31, 2018 - Financial Report B4 (August 31, 2018)

SUMMARY

Issue: Record of increases or decreases in the cash position, assets and liabilities of Watermaster for the Period of August 1, 2018 through August 31, 2018.

Recommendation: Receive and file Treasurer's Report of Financial Affairs for the Period August 1, 2018 through August 31, 2018 as presented.

Financial Impact: Funds disbursed were included in the FY 2018/19 "Amended" Watermaster Budget.

Future Consideration

Advisory Committee – October 18, 2018: Receive and File

Watermaster Board – October 25, 2018: Receive and File (Normal Course of Business)

ACTIONS:

Appropriative Pool – October 11, 2018: Received and filed

Non-Agricultural Pool – October 11, 2018: Moved unanimously to receive and file, without approval

Agricultural Pool – October 11, 2018: Received and filed

Advisory Committee – October 18, 2018:

Watermaster Board – October 25, 2018:

BACKGROUND

A Treasurer's Report of Financial Affairs for the Period August 1, 2018 through August 31, 2018 is provided to keep all members apprised of the total cash in banks (Bank of America, LAIF, and CalTRUST); cash on deposit in trust with the County of San Bernardino as a result of the Cooperation and Reimbursement Agreement between Chino Basin Watermaster and County of San Bernardino dated May 25, 2017; and cash on hand at the Watermaster office (petty cash) at the end of the period stated. The Treasurer's Report details the change (increase or decrease) in the overall cash position of Watermaster, as well as the changes (increase or decrease) to the assets and liabilities section of the balance sheet. The report also provides a detailed listing of all deposits and/or withdrawals in the California State Treasurer's Local Agency Investment Fund (LAIF) and/or CalTRUST, the most current effective yield as of the last quarter, and the ending balance in LAIF as of the reporting date.

DISCUSSION

The Treasurer's Report of Financial Affairs has been created from various financial reports and statements created from Intuit QuickBooks Enterprise Solutions 18.0, the Watermaster accounting system. The Treasurer's Report provided, balances to the supporting documentation in the Watermaster accounting system, as well as the supporting bank statements.

STAFF REPORT

DATE: October 18, 2018
TO: Advisory Committee
SUBJECT: Budget vs. Actual Report for the Period July 1, 2018 through August 31, 2018 -
Financial Report B5 (August 31, 2018)

SUMMARY

Issue: Record of revenues and expenses of Watermaster for the Period of July 1, 2018 through August 31, 2018.

Recommendation: Receive and file Budget vs. Actual Report for the Period July 1, 2018 through August 31, 2018 as presented.

Financial Impact: Funds disbursed were included in the FY 2018/19 "Amended" Watermaster Budget.

Future Consideration

Advisory Committee – October 18, 2018: Receive and File

Watermaster Board – October 25, 2018: Receive and File (Normal Course of Business)

ACTIONS:

Appropriative Pool – October 11, 2018: Received and filed

Non-Agricultural Pool – October 11, 2018: Moved unanimously to receive and file, without approval

Agricultural Pool – October 11, 2018: Received and filed

Advisory Committee – October 18, 2018:

Watermaster Board – October 25, 2018:

BACKGROUND

A Budget vs. Actual Report for the period July 1, 2018 through August 31, 2018 is provided to keep all members apprised of the total revenues and expenses for the current fiscal year. The expense section is categorized into four distinct sections. Those sections are: General and Administrative Expenses; Optimum Basin Management Program Expenses; Project Expenses; and Other Income/Expenses. The Budget vs. Actual report has been created from Intuit QuickBooks Enterprise Solutions 18.0, the Watermaster accounting system. The Budget vs. Actual report provided, balances to the supporting documentation in the Watermaster accounting system, as well as the supporting bank statements.

DISCUSSION

CURRENT MONTH – AUGUST 2018

Year-To-Date (YTD) for the two months ending August 31, 2018, all but seven categories were at or below the projected budget. The categories over budget were: (1) the Administration Salary/Benefits expenses (6010's) which were over budget by \$7,410 or 4.1% as a result of increased staff time and activities in the administrative functions. Please note that the overage is only in the administrative section, not with the entire consolidated staffing budget; (2) Watermaster Legal Services expenses (6070's) over budget by \$67,375 or 259.1% as a result of miscellaneous legal matters as detailed in the BHFS section; (3) Business Insurance expenses (6080's) over budget by \$6,846 or 23.8% as a result of the additional coverage for Environmental and Pollution Liability as recommended by our broker, for water sampling activities within the basin by the Watermaster staff, not budgeted for in the FY 2018/19 budget; (4) Watermaster Board expenses (6300's) over budget by \$2,001 or 7.4% as a result of increased activities and Board meetings during the months of July 2018 through August 2018; (5) Appropriative Pool Administration expenses (8300's) over budget by \$1,520 or 6.3% as a result of increased legal activities by the Appropriative Pool attorney for the months of July 2018 through August 2018; (6) Agricultural Pool Legal Services (8467's) over budget by \$32,950 or 96.4% as a result of increased legal activities performed by the Agricultural Pool's attorney during the months of July 2018 through August 2018; and (7) Non-Agricultural Pool Administration expenses (8500's) over budget by \$7,653 or 40.6% as a result of increased legal activities performed by the Non-Agricultural Pool's attorney during the months of July 2018 through August 2018. For the majority of the expense categories within the Watermaster budget for FY 2018/19, the individual line-item budgets are divided into 12-monthly amounts and allocated accordingly. As the fiscal year progresses, these categories listed above could level out over time and be within the budget levels.

Overall, the Watermaster (YTD) Actual Expenses were \$2,341,399 or 34.0% below the (YTD) Budgeted Expenses of \$6,896,598.

PREVIOUSLY REPORTED ACTIONS (Descending Order)

July 2018:

During the month of July 2018, the "Carry Over" funding was calculated. The Total "Carry Over" funding amount of \$4,728,140.07 has been posted to the general ledger accounts. The total amount of \$4,728,140.07 consisted of \$3,068,940.82 from Capital Improvement Projects, \$1,594,653.00 from Engineering Services, and \$64,546.25 from Administration Services. More detailed information is provided regarding this issue under the "Carry Over" Funding section.

The Amended Budget for FY 2018/19 is \$13,615,365.07 which includes \$4,728,140.07 for the prior years "Carry Over" funding. The Original Approved budget for FY 2018/19 of \$8,887,225 was adopted by the Watermaster Board on May 24, 2018 ($\$8,887,225 + \$4,728,140.07 = \$13,615,365.07$).

SALARIES EXPENSE

CURRENT MONTH – AUGUST 2018

As of August 31, 2018, the total (YTD) Watermaster salary expenses were \$13,607 or 4.3% below the (YTD) budgeted amount of \$319,656. The overall staffing budget was developed with a staffing level of ten Full-Time Equivalents (FTE's), and staffing is currently at ten Full-Time Equivalents (FTE's) as of October 2, 2018.

Two candidates for the Field Operations Specialist (position #9 and position #10) were presented with a conditional offer letter dated September 7, 2018. Both candidates successfully cleared a background investigation, drug screening, and pre-employment physical. The two new Watermaster employees started employment on Tuesday, October 2, 2018. Both employees will be introduced to the Watermaster parties at the Pools, Advisory, and Board meetings during the month of October 2018.

Watermaster utilizes an in-house database time and attendance system to track and record staff's actual hours worked and records those hours to a specific project or activity. This time and attendance database of captured staff hours and activities is the basis for the bi-weekly payrolls which are processed using an external payroll processing service. Watermaster staff can record time to a large number of activities but the five most used categories are as follows (1) General Administrative activities; (2) Paid Leaves of vacation, sick or holiday; (3) Pools, Advisory or Board Meeting attendance; (4) OBMP activities; and (5) OBMP Implementation Program Elements 1 through 9 activities.

When the FY 2018/19 budget was developed, basic assumptions were used in allocating how staff's time would be spent and on which of the projects or activities. The staffing dollars were then allocated into those specific areas and budgeted on a 1/12 monthly budget. When actual staffing activities vary from the budgeted assumptions, a positive or negative variance can be created. Currently, the allocations are tracking within budget.

The table summarizes the Year-To-Date (YTD) Actual Watermaster salary costs compared to the Year-To-Date (YTD) Budget as of August 31, 2018. Please be advised that the "\$ Over Budget" and the "% of Budget" columns are a comparison of the (YTD) Actual to the (YTD) Budget, not the 12-month Annual Budget. The 12-month Annual Budget column is presented only to provide the data in a full and complete format. The following details are provided:

PREVIOUSLY REPORTED ACTIONS (Descending Order)

July 2018:

The Sr. Field Operations Specialist submitted his written resignation on July 3, 2018 and left employment of Watermaster on July 17, 2018. Watermaster staff met with the Personnel Committee on August 23, 2018 to discuss the plan to reclassify Position #10 from a Water Resources Associate to a Sr. Field Operations Specialist. The Personnel Committee unanimously approved and recommended moving forward with the new position reclassification and adjustment.

The positions of Field Operations Specialist (Position #9) and Sr. Field Operations Specialist (Position #10) are currently under recruitment. The final selection of the two top candidates, along with issuance of a conditional offer of employment will take place before September 10, 2018 with the final screening process being successful completion of a background investigation, passing a drug test, and passing a pre-employment physical. The two positions are anticipated to be onboard with Watermaster as early as October 1, 2018. Both candidates will be introduced to the Watermaster parties at the Pools, Advisory, and Board meetings scheduled for October 2018.

LEGAL SERVICES

BROWNSTEIN HYATT FARBER SCHRECK EXPENSES

CURRENT MONTH – AUGUST 2018

The Watermaster Legal Services budget was developed jointly by the Watermaster staff and Brownstein Hyatt Farber Schreck staff with specific assumptions regarding the tasks and legal activities that would occur during FY 2018/19. The total legal services budget was developed by multiplying the number of

hours that would be required to complete the specific tasks by the hourly rate. The "Approved" budget was adopted for the original amount of \$963,028.

As of August 31, 2018, the total (YTD) Watermaster Legal Services expenses (consolidating the three categories of Watermaster Administrative Legal Services, Pool/Advisory/Board Meeting legal expenses, and OBMP legal expenses) were \$31,132 or 19.3% above the (YTD) budgeted amount of \$161,233.

WATERMASTER ADMINISTRATIVE LEGAL SERVICES:

Overall, the Watermaster Administrative Legal Services expense (6070's) as of August 31, 2018, was \$67,375 or 259.1% above the budgeted amount of \$26,003. The specific items within the Administrative Legal Services expenses (6070's) which were over budget were Court Coordination (6071) over budget by \$34,739 or 477.0; Personnel Matters (6073) which were over budget by \$2,261 or 137.0%; Party Status Maintenance (6077) which were over budget by \$1,100 or 36.4%; and the Miscellaneous Category (6078) which were over budget by \$37,020 or 587.6%. Please see Note 1 on the following page for a more detailed explanation of the miscellaneous types of expenses (6078).

The specific items within the Administrative Legal Services expenses (6070's) which were under budget were the expenses for Rules and Regulations (6072) under budget by \$1,805 or 100.0%; and Interagency Issues (6074) under budget by \$5,940 or 100.0%.

WATERMASTER POOLS, ADVISORY AND BOARD LEGAL SERVICES:

The Pools, Advisory Committee and the Board meeting legal expenses from BHFS are captured by month within the accounts (6275, 6375, 6375.1, 8375, 8475 and 8575). The legal service costs associated with the Board Workshop(s) are also included as part of this group. Overall, this category of legal expenses as of August 31, 2018 was \$2,226 or 6.8% below the budgeted amount of \$32,850. Normal Brownstein Hyatt Farber Schreck meeting attendance during any given month includes attendance at all three pool meetings, one Advisory Committee meeting and one Board meeting. The legal services budget was developed with the assumption of having eleven months of meetings, intentionally excluding the month of December 2018. With regards to the Board Meeting expenses (6375), an additional Special Board Meeting was held during the month of July 2018 which increased the legal services for this specific line item category.

OBMP LEGAL SERVICES:

The OBMP legal expenses (accounts 6907.31 through 6907.90) were below the budget for the month. As of August 31, 2018 the category of OBMP legal expenses were \$34,017 or 33.2% below the budgeted amount of \$102,380. The majority of expenses within this OBMP category were under budget (YTD), however, the Recharge Master Plan expenses (6907.39) were over budget by \$6,232 or 78.9%; and Safe Yield Redetermination and Reset legal expenses (6907.42) were over budget by \$21,220 or 111.7%.

The table listed below summarizes the Brownstein Hyatt Farber Schreck (BHFS) expenses as of August 31, 2018 compared to the Year-To-Date (YTD) budget. Please be advised that the "\$ Over Budget" and the "% of Budget" columns are a comparison of the (YTD) Actual to the (YTD) Budget, not the 12-month Annual Budget. The 12-month Annual Budget column is presented only to provide the data in a full and complete format. The following details are provided:

OBMP ENGINEERING SERVICES AND LEGAL COSTS

CURRENT MONTH – AUGUST 2018

Reviewing in total the OBMP Engineering Services and Legal Costs (consolidating the four categories of OBMP Watermaster Staff and SAWPA, OBMP Engineering Services, OBMP Legal Costs, and OBMP Other Expenses) for the two months ending August 31, 2018, the actual expenses of \$230,554 were below the budgeted amount of \$365,302 by \$134,748 or 36.9%. For a detailed discussion, the following is provided.

For August 31, 2018, the accounts 6901-6903 (Optimum Basin Mgmt. Program) section was below the Year-To-Date (YTD) budget by \$13,238 or 42.5%. Watermaster utilizes an in-house database time and attendance system to record and document staff's actual hours worked and also allocates those hours to a specific project or activity. Watermaster staff time could be charged to Administrative, OBMP, or Implementation Project categories. Recently, Watermaster staff spent less time on specific OBMP related areas as budgeted. As a result, Watermaster staff allocated less actual time to the OBMP project as budgeted, which resulted in an under budget variance of \$12,917 or 53.0%. The remaining expense was the Santa Ana Watershed Project Authority (SAWPA) FY 2018/19 Basin Monitoring Program Task Force Contribution which was budgeted at \$6,742 and actual expenses were \$321 or 4.8% below budget as of August 31, 2018.

For August 31, 2018, the accounts 6906 (Optimum Basin Mgmt. Program Engineering Services) section was below the Year-To-Date (YTD) budget by \$86,425 or 37.5%. The majority of expenses within this OBMP category were under budget (YTD), however, the accounts which were over budget were as follows: the Water Rights Compliance Reporting expenses (6906.22) which were over budget by \$8,321 or 194.7%; the OBMP-Data Requests-CBWM Staff Engineering Services expenses (6906.71) which were over budget by \$6,055 or 36.3%; and the OBMP-2018 RMPU Master Update expenses (6906.90) which were over budget by \$45,112 or 497.6%.

Within the category 6907 (Optimum Basin Mgmt. Program Legal Fees) are the remaining Brownstein Hyatt Farber Schreck (BHFS) Watermaster's legal expenses. Within the legal expense category, some individual line item activities were above the budget by \$27,452 while some other line item activities were below the budget by \$61,469. Above the budget line item was the Recharge Master Plan expenses of \$6,232; and the Safe Yield Redetermination and Reset expenses of \$21,220. The individual legal projects/activities that were below budget for the Year-To-Date (YTD) period were the Archibald South Plume of \$2,185; the Chino Airport Plume of \$2,185; the Desalter/Hydraulic Control of \$3,935; the Santa Ana River Water Rights of \$2,437; the Santa Ana River Habitat of \$5,316; the Regional Water Quality Control Board of \$2,625; Storage Agreements of \$11,014; the Prado Basin Habitat Sustainability of \$2,447; SGMA Compliance of \$5,970; OBMP Update of \$18,030; and the WM Unanticipated legal expenses of \$5,325. For the two months ended August 31, 2018, the overall cumulative (YTD) budget was \$102,380 and the actual (BHFS) legal expenses totaled \$68,363 which resulted in an under budget variance of \$34,017 or 33.2%.

The OBMP Other Expenses (6909's) were below the budget for the month. These expenses are typically conference calls, meeting expenses, supplies, annual inspection fees, and other miscellaneous type expenses. As of August 31, 2018 this category of expenses was \$1,069 or 75.8% below the budgeted amount of \$1,410.

The WEI Support for IEUA expenses are categorized within the category (6910's). The individual general ledger accounts are as follows: IRP Groundwater Modeling-WEI expenses (6910.10); As Needed Support for Obtaining Grant Funding of RMPU Projects expenses (6910.11); Preparation of a Compliance Demonstration for Stormwater Recharge expenses (6910.12); Ground Water Velocity Field for the San Sevaime Improvement Project expenses (6910.13); Truing-Up the 2013 RMPU Estimates expenses (6910.14); WEI Support-HCP Modeling expenses (6910.15); and RMPU-MPI Analysis expenses (6910.20). These expenses are billed directly to IEUA on the following month once the payment has been issued to Wildermuth Environmental, Inc. per the agreement. As of August 31, 2018 this category of expenses was fully invoiced in the amount of \$0 to IEUA.

Overall, the Optimum Basin Management Program (OBMP) category was \$230,554 compared to a (YTD) budget of \$365,302 for an under budget of \$134,748 or 36.9% as of August 31, 2018.

The table listed below summarizes the Optimum Basin Management Program (OBMP) expenses as of August 31, 2018 compared to the Year-To-Date (YTD) budget. Please be advised that the "\$ Over Budget" and the "% of Budget" columns are a comparison of the (YTD) Actual to the (YTD) Budget, not the 12-month Annual Budget. The 12-month Annual Budget column is presented only to provide the data in a full and complete format. The following details are provided:

	Jul '18 - Aug '18 Actual	Jul '18 - Aug '18 Budget	\$ Over Budget	% of Budget	FY 2018/19 Annual Budget

ENGINEERING SERVICES - OBMP IMPLEMENTATION PROJECTS COSTS
WILDERMUTH ENVIRONMENTAL, INC.

CURRENT MONTH – AUGUST 2018

As of August 31, 2018, the total (YTD) Engineering Services expenses were \$300,007 or 14.0% below

the (YTD) budget amount of \$2,137,985. The OBMP Implementation Projects (consolidated accounts 7100's – 7700's) were all under budget as of August 31, 2018, with the exception of the Groundwater Quality-Engineering expenses (7103.3) which were over budget by \$10,853 or 32.7%; PE4-Engineering expenses (7402) which were over budget by \$29,542 or 169.0%; and PE8&9-Engineering expenses (7602) which were over budget by \$1,249 or 1.9%.

Wildermuth Environmental, Inc. provides Watermaster an Estimated Cost at Completion (ECAC) report each quarter. The purpose of this ECAC report is to update Watermaster on whether or not the Engineering Services budget will be above or below budget at the end of the fiscal year. If the Engineering Services budget is expected to be above budget at fiscal year-end, a Budget Amendment or Budget Transfer Form would need to be approved to ensure funding. The first quarter ECAC report (for the months July 2018 – September 2018) is scheduled to be produced by Wildermuth Environmental, Inc. and distributed to Watermaster during the month of October 2018.

The table listed below summarized the Year-To-Date (YTD) Actual Wildermuth Environmental, Inc., (WEI) and other Engineering costs compared to the Year-To-Date (YTD) Budget as of August 31, 2018. Please be advised that the "\$ Over Budget" and the "% of Budget" columns are a comparison of the (YTD) Actual to the (YTD) Budget, not the 12-month Annual Budget. The 12-month Annual Budget column is presented only to provide the data in a full and complete format. The following details are provided:

* Wildermuth and Subcontractor Engineering Budget of \$2,929,798 plus Carryover Funds from FY 2017/18 of \$1,594,653
Carryover Funds from FY 2017/18 of \$1,594,653 = \$24,822 (7107.2); \$20,727 (7107.6); \$1,530,279 (7402.10); and \$18,825 (7510)

PREVIOUSLY REPORTED ACTIONS (Descending Order)

July 2018:

The breakdown of the total Task Order amount of \$2,929,798 includes direct labor costs for Wildermuth Environmental, Inc. (87.2%) along with other direct charges such as equipment rental, laboratory fees, travel costs, reproduction costs, and outside professional services (12.8%).

The approved "Original" Engineering Services budget of \$2,929,798 was increased by "Carry Over" funding in the amount of \$1,594,653 to the "Amended" amount of \$4,524,451 for FY 2018/19 as provided in the Engineering Services Task Order. All of the "Carry Over" funding is for projects or activities that have bridged previous fiscal years and are expected to be completed in the FY 2018/19 timeframe or future years. The Carry-Over amount of \$1,594,653 from FY 2017/18 to the FY 2018/19 budget are provided in detail as follows:

1. 7107.2 Ground-Level - Engineering Services of \$24,822. The Watermaster's Subsidence Management Plan includes a "long-term pumping test" in the Managed Area to test the Guidance Level that was budgeted for in FY 2017/18. The test was not performed in FY 2017/18. This carryover budget will support the monitoring of injection, production, groundwater levels, and ground motion associated with the test, if it is performed in FY 2018/19.
2. 7107.6 Ground-Level - Contract Services of \$20,727. The Watermaster's Subsidence Management Plan includes a "long-term pumping test" in the Managed Area to test the Guidance Level that was budgeted for in FY 2017/18. The test was not performed in FY 2017/18. This carryover budget will support the monitoring of injection, production, groundwater levels, and ground motion associated with the test, if it is performed in FY 2018/19.
3. 7402.1 OBMP Engineering Services Northwest MZ-1 for \$1,530,279. The installation of the Pomona Extensometer has been delayed until FY 2018/19 and the monitoring program in Northwest MZ-1 has not yet been fully implemented. The carryover request will support the efforts to drill, construct, equip, test, and document the installation of the Pomona Extensometer, and complete the installation of the monitoring network in Northwest MZ-1.
4. 7510 IEUA - Update Recycled Water Permit-Salinity for \$18,825. The Salinity Management effort is a 2.5-year project and is being cost shared with IEUA. FY 2017/18 was the first year of implementation. The unspent budget in FY 2017/18 is necessary to complete the total project.

PRADO BASIN HABITAT SUSTAINABILITY PROGRAM

Ongoing Costs

Program costs that are ongoing (Ongoing Costs) will be cost-shared between Watermaster and IEUA, split on a 50/50 basis, subject to the following limitation: in each fiscal year, neither Watermaster nor IEUA shall be obligated to reimburse the other for Ongoing Costs that exceed the amount that the reimbursing party has budgeted for Ongoing Costs in that fiscal year, except as agreed upon by both parties in writing or as amended during the fiscal year. The first year expenses (FY 2016/17) to be cost shared were approximately \$300,000, with projected future years (FY 2017/18 and forward) estimated at approximately \$150,000. For the purposes of the agreement, Ongoing Costs are defined as the costs associated with the following Program activities:

1. A Riparian Habitat Monitoring Program, including, but not limited to, the following sub-tasks:
 - a. Design and implement a site-specific vegetation monitoring program with the United States Bureau of Reclamation (USBR) and Orange County Water District, pursuant to which USBR will perform site-specific vegetation surveys.
 - b. Manage and perform custom flight to collect a high resolution air photo of the Prado Basin Region.
 - c. Collect, check, and upload historical air photos and vegetation survey data in the Prado Basin region.
 - d. Collect, check, and upload historical Landsat data in the Prado Basin region.
2. A Climate Monitoring Program, including, but not limited to, the following sub-task:
 - a. Collect, check, and upload climatic data on an annual basis
3. Preparation of the AMP Annual Report (Annual Report), including, but not limited to, the following sub-tasks:
 - a. Water level monitoring, vegetation survey, photo monitoring, landsat data, climate data and analysis of the components.
 - b. Analyze data and prepare an administrative draft of the Annual Report for Watermaster/IEUA.
 - c. Incorporate the Watermaster and IEUA comments and prepare a draft Annual Report for review by the PBHSC.
 - d. Meet with PBHSC to review draft Annual Report.
 - e. Incorporate PBHSC comments and finalize the Annual Report.

4. Annual license fees for monitoring wells.
5. Project management and administration activities associated with the Program undertaken by a Party's consultant, including, but not limited to, the following sub-tasks:
 - a. Ad-Hoc Meetings
 - b. Preparation of scope and budget for the Program
 - c. Project administration and financial reporting
6. Other costs required to fulfill the requirements of Peace II Subsequent EIR mitigation measure 4.4-3.

Watermaster shall be responsible for the costs associated with the Groundwater Level Monitoring Program, Groundwater Quality Monitoring Program, and Surface Water Monitoring Program.

Watermaster and IEUA shall each have responsibility for its own administrative costs, excluding the tasks and expenses included under Set-Up Costs and Ongoing Costs.

Watermaster and IEUA will meet to review the cost-sharing structure under this agreement and negotiate necessary adjustments in good faith on at least an annual basis.

The Peace II SEIR does not explicitly state a duration for the monitoring and mitigation program. It is logical to assume that the program will last until the drawdown impacts, if any, on the riparian habitat from Peace II activities are fully manifested and not predicated to worsen, and that mitigation measures, if any are required, are fully implemented. This is not a perpetual agreement. Upon termination of the monitoring and any necessary mitigation obligations, the parties may elect to terminate the cost share agreement.

OTHER INCOME AND EXPENSE

There were no other significant items to report within the category of Other Income and Expenses for the month ending August 31, 2018.

PREVIOUSLY REPORTED ACTIONS (Descending Order)

July 2018:

Per section VI.D.3 of the Groundwater Storage Program Funding Agreement No. 49960 in the Chino Basin with The Metropolitan Water District of Southern California, the FY 2018/19 annual administrative fee invoice was issued on July 6, 2018 in the amount of \$167,712.36 under invoice number 2018-DYY. Payment in the amount of \$167,712.36 was received and deposited on August 7, 2018.

"CARRY OVER" FUNDING
 BACKGROUND OF "CARRY OVER" FUNDING

Once the FY 2017/18 period as of June 30, 2018 was closed, the amount of unfinished capital projects and related engineering costs was calculated and the "Carry Over" funding amount was added to the current FY 2018/19 budget. The Total "Carry Over" funding amount of \$4,728,140.07 was posted to the accounts as of July 1, 2018. The total amount of \$4,728,140.07 consisted of \$3,068,940.82 from Capital Improvement Projects, \$1,594,653.00 from Engineering Services, and \$64,546.25 from Administration Services (\$3,068,940.82 + \$1,594,653.00 + \$64,546.25 = \$4,728,140.07).

CURRENT MONTH – AUGUST 2018

As of August 31, 2018, the total (YTD) amount remaining of the "Carried Over" funding is \$2,110,726.45 (\$4,728,140.07 - \$2,617,413.62 = \$2,110,726.45).

The following details are provided:

Updated Balance as of August 31, 2018	\$	<u>2,110,726.45</u>				

ADMINISTRATION SERVICES:

Unspent funds related to ongoing projects and associated activities from the Administration Services budget from FY 2017/18 in several accounts totaling \$64,546.25 were "Carried Over" into the current FY 2018/19 budget. These funds were from the Blomquist Report-Update [A] in the amount of \$7,500 in account (6061.6); and Ground Level – MVWD SCADA Reimbursement [B] in the amount of \$57,046.25 in account (7107.63).

ENGINEERING SERVICES:

Unspent funds related to ongoing projects and associated activities from the Engineering Services budget from FY 2017/18 in several accounts totaling \$1,594,653 were "Carried Over" into the current FY 2018/19 budget. These funds were from the Ground Level - Engineering Services [C] in the amount of \$24,822 in account (7107.2); Ground Level - Contract Services [D] in the amount of \$20,727 in account (7107.6); PE4 – Northwest MZ-1 Area Project [E] in the amount of \$1,530,279 in account (7402.1); and PE6&7-IEUA Salinity Management Plan [F] in the amount of \$18,825 in account (7510).

COMPLETED PROJECTS WITH FUNDING AVAILABLE:

Several projects were completed during FY 2017/18 or in prior years and have remaining funds available to be either (1) reallocated to other project(s) that need additional funding, (2) keep amounts on reserve for future Capital Improvement Projects, (3) pay down the debt service; or (4) refunded back to the Appropriative Pool when the Assessment package is invoiced. The funding amounts available are as follows: Jurupa Pumping Station [G] in the amount of \$37,981.33 (account 7209.1); Wineville Basin Proof of Concept [H] in the amount of \$35,397.53 (account 7209.2); East Declez Basin [J] in the amount of \$1,171.33 (account 7690.16); Hickory Basin Recharge Improvement Project [K] in the amount of \$3,877.00 (account 7690.3); and CB20 Turnout Noise Abatement Project [M] in the amount of \$859.80 (account 7690.5). The total amount available is \$79,286.99 ($\$37,981.33 + \$35,397.53 + \$1,171.33 + \$3,877.00 + \$859.80 = \$79,286.99$).

ONGOING RECHARGE IMPROVEMENT PROJECTS:

The RMPU Amendment-Task Order #1 [I] has a remaining budget from FY 2016/17 of \$589,923.18 in account (7690.15); the San Sevaine Recharge Improvement Project-Task Order #8 [L] has a remaining funded budget balance of \$2,299,090.18 in account (7690.4); the GWR SCADA Upgrades-Task Order #4 [N] has a remaining funded budget balance of \$75,290.05 in account (7690.61); the Upper Santa Ana River HCP-Task Order #7 [O] has a remaining funded balance of \$20,062.88 in account (7690.7); and the Lower Day Basin RMPU-Task Order #2 [P] has a remaining funded budget balance of \$5,287.54 in account (7690.8). The total funded budget for these combined projects is \$2,989,653.83.

As invoices are received from the vendors and booked against these items listed above, the "Carried Over" balance will be reduced throughout the current fiscal year. At August 31, 2019, any remaining balances of the FY 2018/19 and prior years funding (if any), along with any new FY 2018/19 expenses, will then be "Carried Over" into the FY 2019/20 budget.

AUDIT FIELD WORK

FY 2017/18:

The auditors from the audit firm of Fedak & Brown LLP were onsite at the Watermaster offices on April 17, 2018. This was the start of the interim field work for the period of July 1, 2017 through February 28, 2018. The final field work for the period of March 1, 2018 through June 30, 2018 was completed during August 7, 2018 through August 8, 2018. The Annual Financial and Audit Reports are scheduled to be presented to the Watermaster Board by Fedak & Brown LLP at the October 25, 2018 Board meeting. The Annual Financial and Audit Reports for FY 2017/18 are anticipated to be posted to the Watermaster website no later than October 31, 2018.

ASSESSMENT INVOICING

CURRENT MONTH – AUGUST 2018

The FY 2018/19 Assessment Package (Draft) is scheduled for presentation at Workshop #1 on Tuesday, October 23, 2018 at 1:00pm. If needed, the FY 2018/19 Assessment Package (Draft) is also scheduled for presentation at Workshop #2 on Tuesday, October 30, 2018 at 1:00pm.

The FY 2018/19 Assessment Package is scheduled for presentation to the Pools on Thursday, November 8, 2018 and to the Advisory Committee and Board on Thursday, November 15, 2018.

If the FY 2018/19 Assessment Package is approved by the Advisory Committee and adopted by the Board on Thursday, November 15, 2018, the Assessment invoices will be issued by Watermaster no later than Friday, November 16, 2018 with payment due 30-days after invoice date. Payments will be due to Watermaster on Monday, December 17, 2018. As past practice, payment can be made to Watermaster by either a wire transfer or check. Per the judgment, late fees could be assessed for any payment not received as of 5:00pm on Monday, December 17, 2018.

To date, all assessment invoice payments have been received. No Assessment activity for the month to report.

STAFF REPORT

DATE: October 18, 2018
TO: Advisory Committee
SUBJECT: Chino Basin Storage Framework (Business Item II.A.)

SUMMARY

Issue: The Chino Basin Storage Framework investigation has been completed and needs to be presented to the Watermaster Board, to be authorized for use in future evaluations of storage.

Recommendation: Recommend to the Watermaster Board to receive and file the Final Storage Framework Investigation Report, and authorize the use of the tools and technical information developed by the investigation for storage planning and future evaluations.

Financial Impact: There is no financial impact to Watermaster as a result of the recommendation,

Future Consideration

Advisory Committee - October 18, 2018: Advice and assistance

Watermaster Board - October 25, 2018: Approval [Within WM Duties and Powers]

ACTIONS:

Appropriative Pool - October 11, 2018: Voted unanimously to Recommend that the Advisory Committee recommend to the Watermaster Board to receive and file the Final Storage Framework Investigation Report, and authorize the use of the tools and technical information developed by the investigation for storage planning and future evaluations.

Non-Agricultural Pool - October 11, 2018: Voted unanimously to Recommend that their Advisory Committee and Board representatives receive and file the Final Storage Framework Investigation Report, and authorize the use of the tools and technical information developed by the investigation for storage planning and future evaluations, subject to any changes they deem appropriate.

Agricultural Pool - October 11, 2018: Voted unanimously to Recommend that the Advisory Committee recommend to the Watermaster Board to receive and file the Final Storage Framework Investigation Report, and authorize the use of the tools and technical information developed by the investigation for storage planning and future evaluations.

Advisory Committee - October 18, 2018:

Watermaster Board - October 25, 2018:

BACKGROUND

The 2000 Optimum Basin Management Program (OBMP) storage management plan consists of managing groundwater production, replenishment, recharge, and storage such that total storage within the basin ranges from a low of 5,300,000 ac-ft to a high of 5,800,000 ac-ft.

The understanding of Chino Basin has improved considerably since 2000 when the OBMP was first created. Collection of data has allowed the refinement and calibration of the groundwater model, which is now used for many purposes. Since the year 2000 the volume held in storage by the parties has increased to over 500,000 ac-ft, and is projected to increase further in the future.

Considering the time that has passed since the environmental documentation was approved for the OBMP, and the enhanced understanding of the basin an update of the OBMP seems appropriate, including a revision of the storage management plan. A study of the basin response to various levels of storage is helpful as a foundation for updating the Chino Basin storage management plan.

DISCUSSION

The goals of the Storage Framework investigation are to describe how the Basin will respond to varying levels of use of storage space, and identify potential material physical injury and other management challenges.

The investigation was carried out using Watermaster's computer model to simulate groundwater pumping, recharge, storage and withdrawals from storage. Metrics for material physical injury and pumping sustainability were established to compare basin response; existing facilities' capacity was examined to determine whether additional facilities would be required for higher volumes of storage space use; and the effects on storage and net inflow to the basin were calculated.

Various scenarios were evaluated, starting with the volume of storage that will be occupied by parties using their projected water management practices, and then incrementally adding up to 300,000 ac-ft of storage for Storage and Recovery programs.

The Storage Framework investigation was reviewed regularly with stakeholders through workshops, and shared in draft form at various stages for parties' review and comments. The final report is attached (Attachment 1).

The investigation will be used as a tool to inform the development of a storage management plan for Chino Basin, to guide and evaluate future storage and recovery applications, and other storage investigations in the future.

Re: September Activity Report

1. Regional Contract
 - The team has conducted four sessions on negotiations. Discussion has focused primarily on recycled water. Goal is to speed up process and achieve an early success. Gathering lists of contract-reports. Preparing reports “score card” to determine value of each report.
2. Proposition One Grant Application
 - Project received full funding of \$206.90 million.
 - Developing work plan with Sylvie Lee as lead staff.
 - Team of GEI (economics), WSC (communication)
 - Board workshops planned 10/3 and 11/7
3. Chino Basin Water Bank
 - Kicked off Phase 2 (tech and econ evaluation).
 - Structure format with Watermaster
 - Storage framework by 10/01.
 - Optimum Basin Management Plan

MEMORANDUM

To: Halla Razak and Kathy Besser

From: Letitia White, Jean Denton, Drew Tatum, Shavenor Winters

Date: September 28, 2018

Re: September Monthly Legislative Update

Congress Passes Appropriations and Continuing Resolution

The House and Senate made significant progress during the month on the fiscal year 2019 appropriations process, sending a total of five of the twelve annual appropriations bills to President Donald Trump in two minibus appropriations packages. Additionally, the agencies not covered by a full year appropriations bill will be funded by a continuing resolution (CR) through December 7, 2018.

On September 12, the Senate passed, by a vote of 92-5, the Conference Report for the first FY19 minibus appropriations package that includes the following appropriations measures: Energy and Water Development; Legislative Branch; and Military Construction-Veterans Affairs (H.R. 5895). The House followed suit on September 13, passing the legislation by a vote of 377-20. The President signed the legislation on Friday, September 21 at a Veterans event in Los Vegas, Nevada. The measure provides slightly more than one-tenth of federal discretionary spending for fiscal year 2019 and includes funding for the Army Corps of Engineers, Bureau of Reclamation, Department of Energy, Department of Veterans Affairs, and Legislative Branch operations.

In addition, the third minibus (H.R. 6157) consisting of the Defense and Labor, Health and Human Services appropriations bills was passed by the House on Wednesday, September 26 by a vote of 361-61 after it passed the Senate on a vote of 93-7 on September 18. The legislation contains a continuing resolution (CR), which runs through December 7, 2018 for the remaining FY19 appropriations bills that have not been enacted, including: Agriculture; Commerce-Justice Science; Financial Services-General Government; Homeland Security; Interior-Environment; State-Foreign Operations; and Transportation-HUD. After the President signed the Defense-Labor bill on September 28, more than 75% of the federal government will be funded by a full year appropriations bill.

Included in the Defense conference report was language expressing concern regarding the Administration's proposed reorganization of the United States Army Corps of Engineers' (USACE) Civil Works Program. Like the Energy and Water Appropriations conference report, this legislation would prohibit the use of funds to implement a memorandum approved by the

Innovative Federal Strategies LLC

Secretary of Defense identifying specific actions the Army will take in support of the Administration's proposed reorganization of the Civil Works program within the USACE. The reorganization would have included taking the Civil Works program out of the Army Corps of Engineers with navigation going to the Department of Transportation for infrastructure grants and the remaining accounts to the Department of the Interior. Defense appropriation conferees were concerned that the Secretary of the Army failed to provide any notification or engage in any discussion with Members of Congress. The House and Senate Appropriations Committee and the conferees are opposed to the reorganization as it could ultimately have detrimental readiness and operational impacts on Department of Defense functions and activities, to include USACE support to ongoing military operations, international partners, and support to United States military installations around the world.

The package included \$90.5 billion for the Health and Human Services (HHS) and most of the funding increase will go to the National Institutes of Health, which received a \$2 billion bump in funding. The additional funding for the NIH is the latest in a series of funding increases for the agency. The funding is aimed at accelerating treatments for cancer, Alzheimer's disease, and other ailments and at addressing the nation's opioid epidemic. The package also includes \$6.7 billion to combat the opioid crisis and to increase access to mental health services. More than \$1 billion in new federal grants will help states, community health centers and other organizations confront the nation's opioid crisis. Nearly \$1 billion of the money is in the form of grants to the states.

President Trump has expressed continued frustration that Congress has not provided funding for a proposed border wall, tweeting criticism of the appropriations process as recently as the week of September 17. "I want to know, where is the money for the Border Security and the WALL in this ridiculous Spending Bill, and where it will come from after the Midterms? Dems are obstructing Law Enforcement and Border Security," President Trump tweeted, adding "REPUBLICANS MUST FINALLY GET TOUGH!" Despite those tweets, the White House has not issued a veto threat for any specific appropriations bill and has agreed to sign Defense and Labor, Health and Human Services appropriations bills, carrying the CR, and avoid a government shutdown.

While the House and Senate had hoped to pass the second minibus appropriations bill that includes the FY19 Interior-Environment; Financial Services-General Government; Transportation-HUD; and Agriculture Appropriations bills, progress on negotiations have stalled.

On Thursday, September 27 Senate Appropriations Chairman Richard Shelby (R-AL) said that lawmakers had run out of time to finish the spending package this week that carries funds for IRS, EPA and infrastructure programs. Provided an agreement is not reached, those agencies, along with agencies covered by the Commerce-Justice-Science; Homeland Security; and State-Foreign Operations spending bills, would be covered by the continuing resolution in the third minibus appropriations package. Under the pending Defense-Labor-HHS minibus each of those agencies would be funded through December 7 at the FY18 enacted funding level.

The status of the twelve annual appropriations bills is included in the table below:

Innovative Federal Strategies LLC

Bill	Status
First Minibus Appropriations Bill including: <ul style="list-style-type: none"> • Energy and Water • Legislative Branch • Military Construction and Veterans Affairs 	Conference Report passed by the House and Senate; signed by President Trump Friday, September 21.
Second Minibus Appropriations bill including: <ul style="list-style-type: none"> • Interior-Environment • Financial Services / General Govt. • Transportation-HUD • Agriculture 	Conferees met on Thursday, September 13, but no agreement has been reached. If an agreement is not reached, these agencies would be covered by the continuing resolution in the third minibuss that runs through December 7, 2018.
Third Minibus Appropriations bill including: <ul style="list-style-type: none"> • Defense • Labor, Health and Human Services • Continuing Resolution through December 7 for all other federal agencies 	Conferees agreed to the Conference Report on Thursday, September 13. The Senate passed the agreement on Tuesday, September 18 and the House followed suit, passing the measure on Wednesday, September 26. The bill was signed by the President on September 28.
Homeland Security Appropriations bill	The House and Senate Appropriations Committees have advanced the legislation out of Committee, but no floor action has been taken in either chamber. The agencies covered by these bills will likely be funded by a Continuing Resolution through December 7 th . We are hearing that the House and Senate hope to package these spending measures together for a fourth minibuss appropriations package after the November elections.

Pete Aguilar Announces Bid for Democratic Caucus Vice Chair

On Tuesday, September 25 Rep. Pete Aguilar (D-CA) announced he would challenge fellow member Rep. Katherine Clark (D-MA) for Democratic Caucus Vice Chair. That position is currently the fifth ranking position in the House Democratic leadership.

Rep. Aguilar said he will focus on increasing cooperation within the caucus and providing excellent service to members.

Innovative Federal Strategies LLC

The Democratic caucus will hold leadership elections for the next Congress sometime in December after the midterm elections.

“With a firm belief that the strength of our Caucus lies in our diversity, I believe I can play a role to help the Caucus as we work to enact policies that work for the American people in the 116th Congress,” he said.

Water Resources Bill Sees Movement

A sprawling water policy bill won resounding approval in the House in early September and now awaits final passage in the Senate. Ahead of the House vote, House and Senate Committee leaders had announced a compromise agreement that enjoys broad bipartisan and bicameral support.

The legislation, S. 3021, passed the House on a voice vote on Thursday, September 13. This is the second time this year that the House overwhelmingly passed a water resources bill, with the chamber voting 408-2 earlier this year on a narrower version of this legislation.

The new legislation was drafted in concert with the Senate, where legislation to reauthorize Army Corps activities has stalled. An earlier bill advanced by the Senate Environment and Public Works Committee ran into trouble when the Congressional Budget Office found that it would cause major deficit spending problems.

This bill includes a two-year extension of a new Environmental Protection Agency water loan program, which was created through the Water Infrastructure Finance and Innovation Act, or WIFIA. It provides states and water utilities with highly subsidized financing to construct mega-projects like water treatment plants or to replace lead pipe.

An earlier effort by some senators to expand WIFIA by giving states the authority to set up their own financing programs was essentially gutted, with lawmakers giving this expansion authority to spend only \$5 million throughout the country.

The bill also would have the National Academies study whether the Army Corps of Engineers should continue to be a part of the Department of Defense. Top Republicans in the House, led by Representatives Bill Shuster (R-PA) and Garret Graves (R-LA), have long criticized the slow pace of the Corps and argued that its awkward placement in the Pentagon makes it less nimble. They initially pushed to include language in the bill to begin reorganizing the Corps immediately, but this legislation simply launches a study.

Additionally, the bill reinstates a requirement that all federally funded water infrastructure projects use American-made iron and steel through at least 2023, a top priority for Sen. Tammy Baldwin (D-WI) that President Donald Trump himself endorsed.

To address oxygen-killing algal blooms, a recent concern in Florida and other states, the bill authorizes a five-year, \$3 million annual program for the Army Corps’ Engineer Research and Development Center. The program will identify and develop technology for the large-scale filtration of water, including early detection, prevention, and management of algal blooms.

The bill also includes several provisions aimed at beefing up coastal readiness and responsiveness to severe storms. They include an authorization of \$75 million for a new beach nourishment and shoreline protection pilot program as well as authorizing a new \$100 million

Innovative Federal Strategies LLC

program to fix storm-damaged drinking water systems and to protect those systems from future storms.

Senator John Barrasso (R-WY), Chairman of the Senate Environment and Public Works Committee, said he has a commitment from the Majority Leader that the chamber will spend as much time as is necessary to break through any objections to the bill and hold a floor vote on the legislation. While there was talk that the Senate would take up the measure during the last week of September, it appears consideration will be pushed into October. The Senate is currently scheduled to be in session into the month of October, as Majority Leader Mitch McConnell (R-KY) has indicated the chamber has work to complete ahead of the midterm elections.

House and Senate Conference on Combating Opioid Relief

House and Senate lawmakers are working to resolve differences between their versions of an authorization bill (H.R. 6) to combat the opioid epidemic.

Some of the key outstanding issues include suspending the Medicaid institution for mental disease (IMD) exclusion, modifying substance use record privacy rules, and addressing medication-assisted treatment patient limits.

Both measures cover Medicare and Medicaid policies, Food and Drug Administration authorities, and a variety of grant programs to address treatment and prevention. They also include provisions designed to curb fentanyl shipments.

The House passed H.R. 6 by a vote of 396-14 on June 22, incorporating several other stand-alone bills. The Senate amended and passed the bill by a vote of 99-1 on Monday, September 17. On Friday, September 28 the House passed an amended version of the legislation as a message to the Senate. The new legislation would expand Medicaid funding for treatment, spur the development of nonaddictive painkillers and empower inspectors to root out deadly fentanyl from overseas. If the Senate agrees to the House changes and acts during the month of October, the legislation could be sent to the White House for President Trump's signature.

FAA Bill

On Wednesday, September 26, the House passed the full reauthorization as well as a short-term extension of aviation programs which would extend through Sunday, October 7. The Senate is likely to pass the short-term extension by unanimous consent, as the remainder of time on the Senate calendar has been dedicated to Supreme Court Justice nominee Brett Kavanaugh.

The bill (H.R. 302) also includes the Disaster Recovery Reform Act, the National Transportation Safety Board Reauthorization Act and the Transportation Security Administration reauthorization, among other non-aviation provisions

Innovative Federal Strategies LLC

House Holds Hearing on Wildfires

The House Committee on Energy and Commerce Subcommittee on Environment held a hearing to examine air quality impacts of wildfires and mitigation and management strategies from stakeholders. The hearing also explored the available tools and best practices to reduce and manage the air quality impacts of wildfires.

Wildfires are a significant source of emissions, especially particulate matter, and often cause the worst air quality days of the year in smoke impacted communities. Researchers have found that wildfires can cause air quality to be 5 to 15 times worse than the air quality on an average day. Moreover, severe wildfire seasons can result in communities experiencing continuous unhealthy air quality conditions for weeks at a time.

Witnesses on the panel presenting before the Subcommittee included Mary Anderson, Mobile and Area Source Program Manager, Air Quality Division, Idaho Department of Environmental Quality; the Honorable Herman E. Baertschiger, Jr., Senator, Oregon State Senate; Tom Boggus, State Forester and Director, Texas A&M Forest Service, on behalf of National Association of State Foresters; Sonya Germann, State Forester, Montana Department of Natural Resources and Conservation, Forestry Division, on behalf of National Association of State Foresters; and Collin O'Mara, President and CEO, National Wildlife Federation (NWF).

The panel provided suggestions to mitigate wildfires and therefore reduce risk of hazardous air quality emissions, including:

- Proscribed burns/control burns mitigate intensity and impact;
- Immediate suppression of wildfires would alleviate impact;
- Smoke management plans, (some states have implemented these);
- Innovative solutions could come from working with all stakeholders – having an open and honest dialogue based on facts and science (such as environmental quality folks, regulators, lawmakers, and landowners).

Collin O'Mara, NWF President, requested Congress examine the FY2018 Omnibus, in which a last-minute change was implemented delaying necessary wildfire mitigation and reconstruction funding from 2018 to 2020. Mr. O'Mara stressed the need for reconstruction from these wildfires sooner than 2020. Additionally, Mr. O'Mara highlighted the provisions in the 2018 Farm Bill, including the collaborative forest landscape program.

Leader McConnell Plans to Keep Senate Working in October

Senate Majority Leader Mitch McConnell told reporters that he plans to keep the Senate in session for a large part of October, if not four entire weeks. The move would mean that vulnerable Democratic Senators would not get as many traditional days off to campaign ahead of the fall midterm elections.

On September 28 the House adjourned for the entire month of October through the November elections.

Innovative Federal Strategies LLC

FCC Chairman Ajit Pai Challenges California

The Federal Communications Commission (FCC) last year scrapped Obama-era net neutrality protections that were enacted in 2015. It asserted in its order that it has the authority to preempt states from adopting their own internet regulations.

Lawmakers in California and 29 other states have introduced bills to adopt net neutrality principles.

FCC Chairman Ajit Pai has blasted a California net neutrality bill as “illegal,” signaling possible agency action if the state’s governor signs the measure into law.

“California is the most ‘egregious example’ of a state passing net neutrality rules that defy federal internet policies,” Pai said. The bill would ban internet service providers from blocking or slowing legal traffic on their networks, as well as charging customers for faster internet lanes.

The California measure would impose among the strictest regulations in the country. It would also ban “zero rating,” which is the practice of ISPs allowing consumers to stream certain content, often their own, without it being counted toward monthly data caps.

California State Sen. Scott Wiener (D), who authored the legislation, said the FCC exceeded its authority to regulate ISPs’ conduct when it rolled back net neutrality rules.

The California measure, if signed into law, would be the fourth new state net neutrality law since Pai’s FCC eliminated its rules. California Gov. Jerry Brown has not said whether he will sign the bill.

Tax Reform 2.0 Revisited

This month has highlighted the ongoing uncertainty for Tax Reform 2.0 efforts, with one-week casting doubt, and the next with House Ways and Means Committee Chairman Kevin Brady (R-TX) spotlighting the introduction of three bills that he says collectively build on the growing economic success of the Tax Cuts and Jobs Act passed by Congress in 2017. These bills make up the Republican Tax Reform 2.0 package that will lock in the individual and small business tax cuts made law in the Tax Cuts and Jobs Act, reform the way families and small business are able to save for retirement, and aim to boost innovative by growing startup businesses.

On Thursday, September 27 and Friday, September 28, the House passed the three pieces of legislation. Since they would require a filibuster proof majority in the Senate, the prospect of any of the legislation advancing is unlikely.

The three-bill package consists of the following measures:

- H.R. 6760, the Protecting Family and Small Business Tax Cuts Act of 2018, sponsored by Rep. Rodney Davis (R-IL), and cosponsored by Rep. Mark Meadows (R-NC), Rep.

Innovative Federal Strategies LLC

Mark Walker (R-NC), House Ways and Means Committee Chairman Kevin Brady (R-TX), and all other Ways and Means Committee Republicans.

- H.R. 6757, the Family Savings Act of 2018, sponsored by Rep. Mike Kelly (R-PA), and cosponsored by Rep. Paul Mitchell (R-MI), House Ways and Means Committee Chairman Kevin Brady (R-TX), and all other Ways and Means Committee Republicans.
- H.R. 6756, the American Innovation Act of 2018, sponsored by Tax Policy Subcommittee Chairman Vern Buchanan (R-FL), and cosponsored by House Ways and Means Committee Chairman Kevin Brady (R-TX) and all other Ways and Means Committee Republicans.

Trade Talks Stall

The North America Free Trade Agreement (NAFTA) talks have missed the latest in a string of deadlines, leaving all eyes on the U.S. over what will happen next.

U.S. Trade Representative Robert Lighthizer and Canadian Foreign Minister Chrystia Freeland met twice Wednesday, September 19 in two sessions totaling nearly four hours after staff had worked through the night.

The talks Wednesday focused largely on tariffs and dispute panels, according to a major stakeholder, Canadian Labor Leader Jerry Dias. Those subjects are two of the biggest sticking points, but time is rapidly running out for a breakthrough. The path forward, for now, remains unclear.

A deal needed to be reached within days to meet a deadline that would allow it to be signed by Mexico's outgoing president. The pressure to secure an agreement quickly is meant to allow time to publish the text of an agreement by Sunday, September 30. The sides were aiming to do that to meet U.S. trade law timelines and allow the deal to be signed before December, when Mexican President-elect Andres Manuel Lopez Obrador takes office.

If the deadline is missed, President Donald Trump has threatened to proceed with Mexico only, potentially quitting the existing NAFTA pact.

U.S. Trade Representative Robert Lighthizer, in a briefing to House Ways and Means Committee members on Thursday, September 27, said he sees March 2019 as the earliest that Congress could vote to approve the revamped North American Free Trade Agreement.

President Trump continued to hit at China the week of September 17, days after announcing another round of tariffs, and consequently signaling the trade war will not end any time soon. His biggest strike yet in a growing trade fight between the world's biggest economies will see a 10 percent duty applied to \$200 billion of Chinese imports, which could rise to 25 percent next year. He's threatened duties on a further \$267 billion of made-in-China goods, which would hit nearly all other consumer products including mobile phones, shoes and clothes.

Innovative Federal Strategies LLC

The decision is likely to put additional pressure on American companies that say Trump's trade dispute with Beijing is increasing uncertainty and boosting costs. Industry groups including the National Retail Federation have been pushing the administration to spare firms and consumers from import tariffs. While the Administration argues that tariffs give the country leverage as it pushes China to reduce trade barriers and protect American firms from unfair practices, such as theft of intellectual property.

Government Reorganization Bill Approved by Senate Committee

Earlier this year, the Office of Management and Budget released a sweeping reorganization plan that included proposals to merge the Education and Labor departments, consolidate welfare programs and privatize the Postal Service and the Federal Aviation Administration. As you will recall, various appropriations bills included language to reject these proposals for departmental and agency reorganization without Congressional approval.

However, Senate Homeland Security and Governmental Affairs Committee Ron Johnson (R-WI) introduced a bill that would give President Donald Trump the ability to consolidate government agencies under a fast-track congressional procedure. The bill was approved on Wednesday, September 26 by the Senate Homeland Security and Governmental Affairs Committee.

The Reforming Government Act (S. 3137) was approved by voice vote after a compromise amendment drafted by Sen. Heidi Heitkamp (D-N.D.) was adopted. The sticking point for Democrats had been that the bill would guarantee a simple majority vote for passage of a reorganization plan, which they said could be abused by the party in power and produce partisan results.

The amendment would provide a choice: either a reorganization bill would have to get 60 votes to overcome a traditional Senate filibuster, or the bill could have sponsorship by five majority and five minority-party senators and be subject to a simple, 51-vote threshold.

Outlook for the Coming Month

While the Senate is poised to work through some, if not the majority, of October the House is expected to recess by Friday, September 28 through Tuesday, November 13, which is after the midterm elections.

The immediate focus of the Senate will continue to be the confirmation of Supreme Court nominee Brett Kavanaugh and other nominees as the Senate works through its tranche of remaining bills and nominees in October. The Senate will also likely vote on the 5-year FAA bill during the first week of the month, provided an agreement is not reached by the end of Friday, September 28 or over the weekend for expedited consideration. The Senate may also consider water resources legislation.

RE: September Report

Overview:

With the Legislature officially finished for the year, the Governor was in the spotlight for the month of September as he took action on over 1,200 bills sent to him by the Legislature in 2018. SB 998 (Dodd) concerning policies and procedures for discontinuing residential water service was signed by the Governor. Eastern Municipal Water District's AB 2050 (Caballero) relating to consolidation of failing water districts sailed through the floor process but was ultimately vetoed by Governor Brown. SB 100 (de Leon) to establish a 100 percent clean energy goal passed and has already been signed by the Governor, who also issued an Executive Order establishing a "carbon neutral" goal for the state by 2050. Additionally, the Governor signed SB 901 (Dodd, D-Napa) relating to wildfire responsibility.

The Department of Water Resources (DWR) has released a Benefit-Cost Analysis for California WaterFix by Dr. David Sunding, a professor of natural resource economics at UC Berkeley. The analysis finds WaterFix could bring billions of dollars in benefits to Californians who obtain their water from participating State Water Project (SWP) contractors.

The process for a contract extension between the DWR and the State Water Contractors turned highly political at the end of the session, with the San Diego County Water Authority and anti-WaterFix advocates falsely claiming the contract extension would authorize WaterFix. After several aborted hearings, the Joint Legislative Budget Committee conducted the hearing required by statute on September 11. DWR Director Karla Nemeth spent a significant amount of time trying to assure Delta Caucus members that there is a separate contract amendment process for WaterFix and that she is happy to make herself available for any legislative oversight hearings in the future. While in-Delta interests weren't ultimately satisfied, the hearing was the final step to getting the contract extended. With all the controversy drummed up over this matter, it is very likely there will be legislative attempts next year to change the contract process for WaterFix.

Inland Empire Utilities Agency Status Report – September 2018

DWR Releases Cost-Benefit Analysis for WaterFix

The Department of Water Resources (DWR) has released a Benefit-Cost Analysis for California WaterFix by Dr. David Sunding, a professor of natural resource economics at UC Berkeley. The analysis finds WaterFix could bring billions of dollars in benefits to Californians who obtain their water from participating State Water Project (SWP) contractors. These benefits include improved water quality, more reliable water supplies, enhanced disaster preparedness, and climate change resilience.

The analysis concludes that the WaterFix benefits to SWP water agencies are substantial. SWP urban agencies could see about \$3.1 billion in net benefits. SWP agricultural agencies could see about \$400 million in net benefits.

“Without WaterFix, State Water Project contractors will see the continued deterioration of their water supply reliability,” Sunding said. “This analysis shows there is substantial benefit for both urban and agricultural water users throughout the state, and that the project will be more affordable for consumers than local alternatives such as desalination and recycling.”

The report compared the benefits and costs of WaterFix to what would likely occur if WaterFix were not built, including further restrictions on existing SWP and CVP operations designed to minimize harmful reverse flows and protect species.

A notable feature of the report is that it monetizes the cost of climate change impacts and the benefits of offsetting those impacts. “WaterFix helps mitigate the impacts of climate change on the state’s water supply system,” Sunding said. “This feature of the WaterFix alone is worth several billion dollars and is an important rationale for implementing the project.”

SB 100 (deLeon): 100 Percent Clean Energy Standard and Governor’s Executive Order on Carbon Neutrality

As originally introduced, SB 100 sought to increase the Renewable Portfolio Standard (RPS) to 100% renewable energy by 2045. As amended in the Assembly, the measure now requires all power generation to come solely from clean or “carbon-free” energy sources. In the interim, the bill expedites the state’s RPS requirements which is currently set at 50% by 2030. Additionally, the bill creates a goal for the state to meet all its retail electric supply with a mix of RPS-eligible and zero carbon resources by 2045.

New requirements under SB 100 include:

2026: 50% RPS

2030: 60% RPS

2045: Planning goal of 100% mix of RPS-eligible and zero carbon resources

Ahead of the Governor's summit on climate change in San Francisco, Governor Brown signed SB 100. Additionally, at the signing ceremony, he said, "California is committed to doing whatever is necessary to meet the existential threat of climate change."

At the SB 100 signing ceremony, Brown also announced an executive order directing California to achieve carbon neutrality-meaning it would remove as much carbon dioxide from the atmosphere as it emits, also by 2045. The state has previously committed to reducing greenhouse gas emissions to 80 percent below 1990 levels by 2050.

The order, which could be rescinded by a future governor after Brown terms out in 2019, instructs the California Air Resources Board to develop a framework for reaching carbon neutrality. Board officials said strategies could include capturing and sequestering carbon in agricultural production, such as in soil, building materials, thinning forests to reduce wildfire risk and restoring ecosystems, like wetlands and meadows that act as natural "sinks" for carbon dioxide.

State Water Project Contracts

What should have been a fairly easy process turned political for the State Water Contractors and the Department of Water Resources (DWR). DWR and the Contractors have been in discussions for years hashing out the details of extending the contract between the two parties beyond 2035. The extension is necessary so that bonds for normal operating expenses and projects can be issued beyond 2035, ensuring more favorable rates.

As discussed in previous reports, the process for DWR and the Contractors became complicated after the San Diego County Water Authority and anti-WaterFix advocates successfully lobbied to have the final statutorily required hearing of the Joint Budget Committee, cancelled several times. The third attempt at a hearing set for September 11, went ahead as scheduled, but was not without significant questioning of DWR Director Karla Nemeth.

The main controversy with the hearing and the extension has been the belief that the contract extension would somehow authorize WaterFix. Chair Mitchell started the hearing clearly stating that there is a separate process for WaterFix and this contract extension is about the every-day operation of the SWP. The Legislative Analyst's Office (LAO) gave an overview of the SWP and the contract extension process, and noted that the LAO has been suggesting for years that the Legislature should have more oversight and control over the SWP.

Director Nemeth was extensively questioned by in-Delta interests about the contract and how it pertains to WaterFix. There was confusion because the contract extension covers all financing including WaterFix eventually, but as stated multiple times by Director Nemeth and Chari Mitchell, there is a separate process for the WaterFix contract amendment and authorization.

A number of legislators expressed concern about the transparency of the contract amendment process, specifically for WaterFix, going forward and those members seemed very interested in increased legislative oversight over the SWP. Since the hearing, Chair Mitchell sent a letter to Director Nemeth asking for greater transparency in the WaterFix contract amendment process, and Director Nemeth responded with assurances DWR will work with the committee to ensure the members have all the information they need. Contract amendment negotiation meetings,

including for the WaterFix, are public meetings. It is very likely that there will be attempts in the next legislative session for increased oversight over the SWP.

Legislative Update

As reported last month, the Legislature adjourned the 2017-2018 Legislative Session on August 31. The Legislature did not take any action on the “Safe and Affordable Drinking Water Fund,” but the Speaker announced a workgroup that would work to find a compromise on the issue. Additionally, efforts to create a Western regional power grid failed to move for the second year in a row. It is likely that both issues will return when the legislature returns in January.

AB 2050 (Caballero)

Eastern Municipal Water District and the California Municipal Utilities Association introduced AB 2050 (Caballero, D-Salinas) as a complementary way to begin addressing drinking water challenges in disadvantaged communities. Their bill looks at how to consolidate failing water agencies under a larger umbrella to provide cost effective technical, managerial and financial support. The bill is supported by Metropolitan Water District of Southern California, the Association of California Water Agencies, the Santa Ana Watershed Project Authority and many local water agencies. The measure made it all the way through the legislative process but was vetoed by the Governor. In his veto message he noted that the bill would create an expensive, bureaucratic process that won’t address his priority of creating a stable funding source for ongoing operations and maintenance costs for drinking water systems with contaminated water.

SB 998 (Dodd)

A coalition of opponents to SB 998, Senator Dodd’s (D-Napa) bill regarding water shutoffs, will turn their focus toward getting the measure vetoed by the Governor. The bill, passed by the Legislature, prohibits a water agency from shutting off water service to a residential customer, under certain conditions. Concerns among stakeholders remain on how the whole shutoff process would work including any Proposition 218 issues that would arise as other customers have to assume the cost of service to any residential property that does not pay their bill. The bill has made its way through three different policy committees with members wanting to support access to clean drinking water for all Californians, but also understanding the Proposition 218 issues water agencies face. Negotiations reached a stalemate with the author not willing to take amendments proposed by a coalition of water interests. ACWA, CMUA and others moved to a straight oppose position. The coalition is targeted the Governor for a veto, but he signed the bill.

Utility Response to Catastrophic Wildfires

One of the most complicated and delicate issues this legislative session has been in response to last year’s catastrophic utility caused wildfires. With a tangled web of interests including fire victims, utilities, insurance companies, trial attorneys, labor unions, and ratepayers, the legislature struggled to come to an agreement on how policies related to these types of natural disaster should be handled moving forward.

In the months since the fires, Cal Fire has released various investigative reports finding PG&E’s transmission lines, other equipment, and less than satisfactory maintenance to be to blame for much of the damage. This prompted PG&E to announce that claims related to the fires will likely exceed \$2.5 billion. Some have speculated that the property damage alone could be as high as \$12 billion. PG&E’s liability insurance would only cover up to \$840 million in damage. Damage estimates have not yet been released for the fires in the Southern California Edison (SCE)

territory, but the issue of who is responsible for those costs, shareholders or ratepayers, will be a significant discussion.

The utilities expressed significant concern and urgency to the legislature, shareholders and others over declining credit ratings and raising the possibility of bankruptcy.

Coming out of the legislative summer recess, a Conference Committee was formed to tackle the issue. They held several public meetings and released a bill just hours before the deadline for amendments. The bill focuses heavily on forest vegetation management. Additionally, the bill allows for the CPUC to shift most of the responsibility for covering cost of the wildfires to ratepayers even when the utility has been found negligent. The costs of the 2017 fires can be “securitized” allowing PG&E to shift most of the cost to their ratepayers, who will pay a surcharge for the next 20 years. Going forward, the measure also establishes new parameters the CPUC must consider, including weather and climate change when assigning “liability”. This change will also result in more costs being shifted to ratepayers in the future. Ratepayers will continue to be on the hook for potentially billions of dollars in utility system improvements to “harden” infrastructure to prevent wildfires.

The measure was passed with bi-partisan support despite strong opposition from ratepayer and business groups who labeled the plan a utility bailout. As Southern California Edison moves into the implementation stage, it will be crucial for water agencies to engage in the discussions over de-energization. There is significant concern that SCE could shut off power for prolonged periods of time during high wind events, which would have significant impacts on water and wastewater agency operations. The bill was signed by Governor Brown, whose office was involved in negotiating the bill. Now, SCE and the other IOUs will submit plans to the CPUC to “harden the system” and outline procedures for shutting off the power. Parties will have an opportunity to engage in the proceeding and offer comments before a decision is made.

State Legislation

Bill Number	Sponsor	Title and/or Summary	Summary/Status	IEUA Position
AB 1668	Friedman	An Act Relating to Water	This bill would state the intent of the Legislature to enact legislation necessary to help make water conservation a California way of life.	SUPPORT Signed by Governor
AB 1654	Rubio	An Act Relating to Water	This bill would state the intent of the Legislature to enact legislation necessary to help make water conservation a California way of life. Bill gutted and now has nothing to do with water.	WATCH Senate Natural Resources and Water
AB 1876	Frazier	Sacramento-San Joaquin Delta: Delta Stewardship Council	The Sacramento-San Joaquin Delta Reform Act of 2009 establishes the Delta Stewardship Council, which consists of 7 members, and requires the council to develop, adopt, and commence implementation of a comprehensive management plan for the Delta, known as the Delta Plan. This bill would increase the membership of the council to 13 members, including 11 voting members and 2 nonvoting members, as specified.	OPPOSE DEAD
AB 869	Rubio	Sustainable water use and demand reduction: recycled water	Excludes, from the calculation of any water use or water efficiency target established after 2020, recycled water, as specified, delivered within the service area of an urban retail or wholesale water supplier	WATCH DEAD
AB 3037	Chiu	Community Redevelopment Law of 2018	Would authorize a city or county to propose the formation of a redevelopment housing and infrastructure agency by adoption of a resolution of intention that meets specified requirements, and providing that resolution to each affected taxing entity. The bill would require the city or county that adopted that resolution to hold a public hearing on the proposal to consider all written and oral objections to the formation, as well as any recommendations of the affected taxing entities, and would authorize that city or	WATCH, and work with CSDA Died on Suspense

			county to adopt a resolution of formation at the conclusion of that hearing.	
SB 606	Skinner/Hertzberg	An Act Relating to Water	This bill would state the intent of the Legislature to enact legislation necessary to help make water conservation a California way of life.	SUPPORT Signed by Governor
SB 623 SB 844 SB 845	Monning	Water Quality: Safe and Affordable Drinking Water Fund	Would establish the Safe and Affordable Drinking Water Fund in the State Treasury and would provide that moneys in the fund are continuously appropriated to the State Water Resources Control Board. The bill would require the board to administer the fund to secure access to safe drinking water for all Californians, while also ensuring the long-term sustainability of drinking water service and infrastructure. The bill would authorize the state board to provide for the deposit into the fund of federal contributions, voluntary contributions, gifts, grants, bequests, and settlements from parties responsible for contamination of drinking water supplies.	WATCH Assembly Rules Committee DEAD
AB 2697	Gallagher	Wildlife, bird, and waterfowl habitat: idled agricultural lands	Would require the Wildlife Conservation Board to establish a program, which may include direct payments or other incentives, to encourage landowners to voluntarily cultivate or retain cover crops or other upland vegetation on idled lands to provide waterfowl, upland game bird, and other wildlife habitat cover for purposes, including, but not limited to, encouraging the use of idle agricultural lands for wildlife habitat. The bill would also authorize the department to provide incentives pursuant to the program for the creation or enhancement of waterfowl brood habitat, and to develop guidelines and criteria for the program as it deems appropriate.	WATCH 5/25 Amends removed opposition. Signed by Governor

AB 1778	Holden	Transit-Oriented Redevelopment Law of 2018	Current law dissolved redevelopment agencies as of February 1, 2012, and designates successor agencies to act as successor entities to the dissolved redevelopment agencies. This bill, the Transit-Oriented Redevelopment Law of 2018, would authorize a city or county to propose the formation of a redevelopment agency by adopting a resolution of intention that meets specified requirements, and submitting that resolution to each affected taxing entity and to each owner of land within the district.	WATCH Asm. Local Gov. Never heard in policy committee DEAD
AB 327	Gibson	South Coast Air Quality Management District: Fleets	Would authorize the governing board of the south coast district to adopt rules and regulations that require specified operators of public and commercial fleet vehicles consisting of 15 or more vehicles to purchase the cleanest commercially available vehicles, as defined, that will meet the operator's operational needs; to require the replacement of no more than 15% of existing vehicles per calendar year, as specified; and to require those cleanest commercially available vehicles to be operated, to the maximum extent feasible, in the south coast district.	WATCH Sen Trans. & Housing Failed in committee
SB 998	Dodd	Discontinuation of residential water service: urban and community water systems	Would require an urban and community water system, defined as a public water system that supplies water to more than 200 service connections, to have a written policy on discontinuation of water service to certain types of residences for nonpayment available in prescribed languages. The bill would require the policy to include certain components, be available on the system's Internet Web site, and be provided to customers in writing, upon request.	OPPOSE Signed by Governor
SB 120	Roth	Water conveyance: use of facility with unused capacity	This bill would, notwithstanding that provision, prohibit a transferor of water from using a water conveyance facility that has unused capacity to transfer water from a groundwater basin underlying desert lands, as defined, that is in the vicinity of specified federal lands or state lands to outside of the groundwater basin unless the State Lands Commission, in consultation with the Department of Fish and Wildlife, finds that the transfer of the water will not adversely affect the natural or cultural resources of those federal and state lands.	OPPOSE DEAD

Federal Legislation of Significance

P78

Bill Number	Sponsor	Title and/or Summary	Summary/Status
H.R. 8/ S.2800 (subsequently replaced by S.3021)	Rep. Bill Shuster(R-PA)/ Sen. John Barrasso (R-WY)	Water Resources Development Act/ America's Water Infrastructure Act of 2018 (America's Water Infrastructure Act of 2018)	<p>The bill authorizes proposed U.S. Army Corps of Engineers civil works activities and provides reforms to the Corps. WARDA authorizes locally driven, but nationally vital, investments in the Nation's water resources infrastructure. It strengthens economic growth and competitiveness, helps move goods throughout the country and abroad, and protects our communities. The legislation passed the House on June 6, 2018 by a vote of 408 to 2. It was received in the Senate and placed on the Senate Legislative Calendar under General Orders.</p> <p>The Senate version of the bill, America's Water Infrastructure Act of 2018 was introduced in May 8, 2018. The legislation was marked and reported favorably out of committee on Tuesday, May 22, 2018. Senator Barrasso filed a written report to accompany the bill on July 10, 2018.</p> <p>Since the Senate was unable to pass its own legislation, the House and Senate pre-conferenced legislation in a bipartisan manner, which was passed the House as a substitute amendment to S. 3021. The Senate is expected to have the votes to pass the legislation, though the timeline for floor consideration is unclear.</p>
H.R.5895	Rep. Mike Simpson (R-ID)	Fiscal 2019 Energy and Water Development, Legislative Branch, and MilCon-VA Appropriations "Minibus"	<p>Provides FY2019 appropriations for U.S. Army Corps of Engineers civil works projects, the Department of the Interior's Bureau of Reclamation, the Department of Energy (DOE), and independent agencies such as the Nuclear Regulatory Commission. The legislative branch section, would provide additional funds for the Office of Compliance for training and higher caseloads. The office handles workplace protection complaints for the legislative branch. It also would block the automatic cost-of-living increase for members of Congress. The legislation would also appropriate funding for military construction and the Department of Veteran's Affairs.</p> <p>The legislation was passed in both the House and the Senate and was conferenced to reconcile discrepancies. It became Public Law (PL-115-244) on September 21, 2018.</p>
H.R. 6147	Rep. Ken Calvert (R-CA)	Fiscal 2019 Interior-Environment, Financial Services	<p>The legislation includes funding for the Department of the Interior, the Environmental Protection Agency (EPA), the Forest Service, the Indian Health Service, and various independent and related agencies. These funds are targeted to</p>

		Appropriations "Minibus"	<p>important investments in the nation's natural resources, including \$3.4 billion for the Department of the Interior and U.S. Forest Service to prevent and combat devastating wildfires.</p> <p>The legislation also contains several policy provisions Republicans say will "rein in unnecessary regulations at the EPA and other agencies." The Financial Services bill would provide funding for the United States Department of the Treasury, as well as the United States federal courts, the Executive Office of the President of the United States,</p> <p>The legislation was passed in both the House and Senate and both chambers are conferencing together in order to reconcile discrepancies between each chamber's version. Since the final conference report has not been finalized. The agencies funded by the legislation will be funded under a continuing resolution through December 7, 2018.</p>
H.R. 5609	Rep. Keith Ellison (D-MN)	Water Affordability, Transparency, Equity, and Reliability Act of 2018	<p>The legislation would establish a trust fund to provide for adequate funding for water and sewer infrastructure, and for other purposes.</p> <p>The bill was referred to the Subcommittee on Commodity Exchanges, Energy, and Credit on Tuesday, May 22, 2018 and no further action has been taken.</p>
H.R. 5003	Rep. Randy Hultgren (R-IL)	To amend the Internal Revenue Code of 1986 to reinstate advance refunding bonds	<p>The legislation was referred to the House Committee on Ways and Means on Tuesday, February 13, 2018 and no further action has been taken.</p>
H.R.4902/ S. 2364	Rep. John Katko (R-NY)/ Sen. John Boozman (R-WY)	Securing Required Funding for Water Infrastructure Now Act	<p>The legislation would amend the Water Infrastructure Finance and Innovation Act of 2014 to provide to State infrastructure financing authorities additional opportunities to receive loans under that Act to support drinking water and clean water State revolving funds to deliver water infrastructure to communities across the United States.</p> <p>The bill was referred to the Subcommittee on Water Resources and Environment on January 31, 2018, and the Subcommittee on Environment on February 2, 2018. No further action has been taken.</p> <p>The Senate version of the bill, which would amend WFIA in the same manner, was introduced on Tuesday, January 30, 2018 and was referred to the Committee on Environment and Public Works.</p>

S.2329	Sen. John Hoeven (R-ND)	Water Infrastructure Finance and Innovation Reauthorization Act of 2018	<p>This measure is designed to spur investments in water project development across the nation by supplementing federal funding of water infrastructure projects — including wastewater treatment, flood control and storm water management — with long-term, low-cost loans and loan guarantees, reauthorize and amend the Water Infrastructure Finance and Innovation Act of 2014, and double the Environmental Protection Agency’s fiscal year 19 WIFIA authorization to \$90 million and extend the program for five years, through 2024.</p> <p>The legislation was introduced Tuesday, January 23, 2018 was referred to the Committee on Environment and Public Works</p>
H.R.4492	Rep. Brian Mast (R-FL)	Water Infrastructure Finance and Innovation Reauthorization Act of 2017	<p>H.R. 4492 is a companion bill to S.2329 and would spur investments in water project development across the nation by supplementing federal funding of water infrastructure projects.</p> <p>This bill was introduced Thursday, November 30, 2017, and was referred to the Subcommittee on Water Resources and Environment, and the Subcommittee on the Environment.</p>
H.R. 5127	Rep. Grace Napolitano (D-CA)	Water Recycling Investment and Improvement Act	<p>The legislation would assist water agencies with the expansion, planning, designing, and building of water recycling plants and modernizing water infrastructure by making changes to the WIIN Act Title XVI water recycling and reuse program by removing the requirement of funding projects that are in drought or disaster areas, increasing the authorization from \$50 million to \$500 million, making the program permanent rather than sun-setting in 2021, and taking away the requirement that the projects need to be designated in an appropriations legislation.</p> <p>The bill was introduced on Tuesday, February 27, 2018, and was referred to the Subcommittee on Water Resources and Environment, and the Subcommittee on Water, Power, and Oceans.</p>
H.R. 3711	Reps. Lamar Smith (R-TX)/Ken Calvert (R-CA) /Bob Goodlatte (R-VA)	Legal Workforce Act	<p>A bill that would require all U.S. employers to use the E-Verify electronic employment verification system. The requirement would be phased over a two-year period, starting with the largest employers. The agriculture industry would have an additional six months (or 30 months total) to come into compliance.</p> <p>H.R. 3711 was referred to the Committee on the Judiciary, and in addition to the Committees on Ways and Means, and Education and the Workforce on Friday, September 8th. On Wednesday, September 27th, H.R.3711 was referred to Judiciary Subcommittee on Immigration and Border Security. Judiciary Committee Consideration and Mark-up Session was held on Wednesday, October 25th. H.R.</p>

			3711 was ordered and reported (amended) by the yeas and nays: 20-10 on October 25, 2017.
H.R. 23	Rep. David Valadao (R-CA)	Gaining Responsibility on Water Act of 2017	<p>Among other things the legislation would require regulators to comply with the Bay-Delta Accord and make changes to the state's Central Valley and State Water projects and streamline permitting processes. The bill included provisions from multiple other bills previously passed by the House that sought to increase the flow of water to areas of California that have experienced drought over the past five years. The measure was referred to the House Committee on Natural Resources and the Committee on Agriculture.</p> <p>By a vote of 230-190, the House passed H.R. 23, as amended, on July 12, 2017. H.R. 23 was received in Senate, read twice and referred to the Committee on Energy and Natural Resources on July 18, 2017.</p>
H.R. 4/ S.1405 (replaced by H.R.302)	Rep. Bill Shuster (R-PA)/ Sen. John Thune (R-SD)	FAA Reauthorization Act of 2018/ Federal Aviation Administration Reauthorization Act of 2017	<p>Among other issues this legislation would reauthorizes the Federal Aviation Administration for five years. Among other things the FAA reauthorization funds aviation programs, Airport Planning and Development and Noise Compatibility Planning and Programs and authorizes FAA's Airport Improvement Program (AIP) account at \$3.350 billion annually for each of fiscal years 2018-2023.</p> <p>By a vote of 393 – 13, the House passed H.R.4. The Senate has received the bill and placed it on the Senate Legislative Calendar under General Orders but will likely vote to maintain the legislation through a short-term extension through October 7.</p> <p>The Senate version of the bill was favorably reported out of the Committee on Commerce, Science, and Transportation on May 5, 2018 and was then placed on the Senate Legislative Calendar.</p> <p>Since the Senate was unable to pass its own legislation, the House and Senate pre-conferenced legislation in a bipartisan manner, which was passed the House as a message / substitute amendment to H.R. 302. The Senate is expected to have the votes to pass the legislation, though the timeline for consideration is unclear. The Senate is likely to pass a short term reauthorization that was passed by the House to give themselves an additional week to pass the 5-year authorization.</p>

H.R. 1663	Rep. Grace Napolitano (D-CA) / Rep. Rob Wittman (R-VA)	Water Resources Research Amendments Act	<p>This legislation would extend a Federal-State partnership aimed at addressing state and regional water problems, promoting distribution and application of research results, and providing training and practical experience for water-related scientists and engineers. H.R. 1663 would authorize \$9,000,000 annually over five years for grants to water resources research institutes and require two-to-one matching with non-federal funds. It would also promote exploration of new ideas, expand research to reduce energy consumption, and bolster reporting and accountability requirements.</p> <p>The bill has been introduced in the House Committee on Natural Resources and referred to the Subcommittee on Water, Power and Oceans on March 27, 2017.</p>
H.R. 497/ S.357	Rep. Paul Cook (R-CA)/ Sen. Dianne Feinstein (D-CA)	Santa Ana River Wash Plan Land Exchange Act	<p>This bill directs the Department of the Interior: (1) to quitclaim to the San Bernardino Valley Water Conservation District in California approximately 327 acres of identified federal land administered by the Bureau of Land Management, and (2) in exchange for such land, to accept from the Conservation District a conveyance of approximately 310 acres of its land.</p> <p>On April 27th H.R. 497 passed through the House Natural Resources Committee by unanimous consent and was scheduled for the House Floor Consideration on June 2nd.</p> <p>This bill was passed by the House on June 27th by a vote of 424-0. The bill was referred to the Senate Committee on Energy and Natural Resources on June 28th and no further action has been taken.</p> <p>The Senate Environment and Public Works Committee held a hearing on S. 357 on July 26, 2017.</p> <p>On May 15, 2018 the Senate Committee on Energy and Natural Resources ordered H.R. 497 to be reported without amendment favorably.</p> <p>On August 15, 2018 Senator Murkowski from the Senate Committee on Energy and Natural Resources filed a written report to accompany H.R. 497.</p>
S. 32 / H.R. 857	Sen. Dianne Feinstein (D-CA) / Rep. Paul Cook (R-CA)	California Desert Protection and Recreation Act / California Off-Road	<p>This bill would designate important wilderness in the California desert and protect lands for recreation, wildlife and tourism. Aspects of the bill include:</p> <ul style="list-style-type: none"> • Mandate study and protection of Native American cultural trails along the Colorado River.

		Recreation and Conservation Act	<ul style="list-style-type: none"> • Designate 230,000 acres of additional wilderness area between the Avawatz Mountains near Death Valley to Imperial County's Milpitas Wash. • Add 43,000 acres to Death Valley and Joshua Tree national parks. • Create a 75,000-plus acre special management area at Imperial County's Vinagre Wash. • Designate Inyo County's Alabama Hills as a National Scenic Area. • Prohibit new mining claims on 10,000 acres in Imperial County considered sacred by the Quechan Tribe. <p>Additionally, the bill protects 140,000 acres of existing off-road vehicle riding areas from mining, energy development, military base expansion or other decisions that would close them to vehicle use.</p> <p>The Senate Environment and Public Works Committee held a hearing on S.32 on July 26, 2017.</p> <p>H.R. 857, California Off-Road Recreation and Conservation Act, is a similar bill and largely aims to address similar issues. As the House has passed Congressman Cook's bill, staff from the House and Senate are attempting to work on a path forward.</p>
H.R. 2510	Rep. Peter DeFazio (D-OR)	Water Quality Protection and Job Creation Act of 2017	<p>This bill would amend the Federal Water Pollution Control Act to authorize appropriations for State water pollution control revolving funds.</p> <p>This bill was introduced on May 19, 2017 and was referred to the Subcommittee on Water Resources and Environment.</p>
H.R. 1654	Rep. Tom McClintock (R-CA)	Water Supply Permitting Coordination Act	<p>This bill would allow water project sponsors the opportunity to use an expedited permitting process for new or expanded surface non-federal storage facilities through the Bureau of Reclamation, which would be the lead and central agency coordinating the review process.</p> <p>The House Natural Resources Committee approved the bill by a vote of 24-16 on April 27. The House Rules Committee on June 20th dictated final amendments for passage on the House Floor; this bill passed the House on June 22 by a vote of 233-180. H.R. 1654 was referred to the Senate Committee on Energy and Natural Resources on June 26 and no further action has been taken.</p>
H.R. 6084	Rep. Brian Babin (R-TX)/ Rep. Terri Sewell (D-AL)	Onsite Wastewater Recycling Efficiency Act	<p>This bill would allow for the provision of information and resources to fully use decentralized wastewater systems in the United States to provide affordable wastewater recycling and treatment.</p>

			This bill was introduced on September 13, 2018 and referred to the Subcommittee on Water Resources and Environment on September 14, 2018.

Date: October 17, 2018

To: The Honorable Board of Directors

From: Halla Razak, General Manager

Committee: Community & Legislative Affairs

10/10/18

Executive Contact: Kathy Besser, Executive Manager of Ext. Aff. & Policy Dev./AGM

Subject: Public Outreach and Communication

Executive Summary:

This is an informational item that provides highlights of the External Affairs team's monthly outreach, education and communication programs and updates.

October

- October, National Energy Awareness Month
- October 6 – October 14, Water Professionals Appreciation Week
- October 20, Landscape & Water Conservation Festival, Chino Basin Water Conservation District, 4594 San Bernardino Street, Montclair, 9:00 a.m. – 2:00 p.m.
- October 30, Blood Drive, IEUA HQB Event Room, 8:00 a.m. – 1:00 p.m.

November

- November 3, Solar Cup Boat Building Workshop, Three Valleys MWD, 1021 E. Miramar Avenue, Claremont, Time TBD
- November 7, Rotary Club of Upland Meeting (IEUA staff to present on Water Softener Removal Rebate Program), Landecena Community Center, 1325 E. San Bernardino Road, Upland, 12:00 p.m.

Staff's Recommendation:

This is an informational item for the Board of Directors to receive and file.

Budget Impact: N *Budgeted (Y/N):* N *Amendment (Y/N):* N *Requested Amount:*

December

- December 19, Employee Recognition Holiday Luncheon, Los Serranos Country Club, 15656 Yorba Avenue, Chino Hills, 11:00 a.m. – 3:00 p.m.

Media and Outreach

- Staff ran an ad in the *Chino Champion's* Senior Living section on October 6.
- External Affairs staff is working with Agency department leads to update the Agency's external website.
- Staff is continuing to schedule service club presentations highlighting IEUA's Water Softener Removal Rebate Program.
- Agency staff is working on a video short featuring the Agency's renewable energy portfolio.
- September: 11 posts were published to the IEUA Facebook page, eight posts were published to IEUA's Instagram and 10 tweets were sent on the @IEUAWater Twitter handle.
 - The top three Facebook posts, based on reach and engagement, in the month of September were:
 - 9/5: National Preparedness Month
 - 9/6: #ThursdayThoughts
 - 9/14: #FunFactFriday
 - The top three tweets, based on reach and engagement, in the month of September were:
 - 9/18: World Water Monitoring Day
 - 9/6: #ThursdayThoughts
 - 9/5: National Preparedness Month
 - The top three Instagram posts, based on reach and engagement, in the month of September were:
 - 9/12: National Preparedness Month
 - 9/6: #ThursdayThoughts
 - 9/14: #FunFactFriday

- During the months of August and September, staff promoted a post about the Water Discovery Field Trip and Tours as a boosted/paid post. The post reached 3,788 people in IEUA's service area.
- The City of Chino Hills will include Automatic Water Softener Removal Rebate inserts with the September/October billing to 22,000 residents.

Education and Outreach Updates

- Staff has begun program outreach for the new school year this month. Principal meetings will be scheduled in addition to digital and postal outreach methods.
- Staff has begun scheduling Water Discovery Field Trips. To date, 33 schools have made reservations for the current school year.
- Solar Cup teams are confirmed: Los Osos High School (Rancho Cucamonga), Chino Hills High School and Upland High School.

Semiannual Status Report

Chino Airport Plume

October 2018

Contaminants: The County of San Bernardino Department of Airports (County) identifies four primary contaminants; trichloroethene (TCE), 1,2,3-trichloropropane (1,2,3-TCP), cis-1,2-dichloroethene (cis-1,2-DCE), and 1,2-dichloroethane (1,2-DCA) associated with the Chino Airport groundwater plume. The California maximum contaminant levels (MCLs) for TCE, 1,2,3-TCP, cis-1,2-DCE, and 1,2- DCA, as well as the maximum concentrations detected in groundwater samples collected from wells within the plume area over the five-year period from July 2013 to June 2018 are shown in the table below.

Contaminant	MCL (µgl)	Maximum Concentration (µgl)
TCE	5	830
1,2,3-TCP	0.005	44
cis-1,2-DCE	6	47
1,2- DCA	0.5	1.5

Other contaminants of concern include 1,1-dichloroethene, carbon tetrachloride, and 1,4-dioxane.

Location: The Chino Airport is located in the southwestern portion of the Chino Basin within the City of Chino. As delineated by the Chino Basin Watermaster (Watermaster) in 2017 for the *2016 State of the Basin Report*¹, the extent of the plume with detectable TCE concentrations greater than 0.5 µgl is about 3,500 feet wide and 12,500 feet long, extending southwest from the Chino Airport to just south of Pine Avenue (see Exhibit 1).

Since 2015, the County characterizes two plumes originating from different source areas at the Chino Airport: the West Plume and the East Plume. TCE and 1,2,3-TCP concentrations are the largest in regard to magnitude and lateral extent within the West Plume. The most recent characterization of TCE and 1,2,3-TCP concentrations prepared by the County were part of the *Semiannual Groundwater Monitoring Report Summer and Fall 2017*². Exhibit 1 shows the County’s delineation of the West and East Plumes with TCE concentrations greater than or equal to 5 µgl, and the West and East Plumes with 1,2,3-TCP concentrations greater than 0.5 µgl.

TCE Plume. The West TCE Plume extends roughly 9,000 feet towards the southwest from its source area and then extends another 2,400 feet to the southeast towards the Prado Flood Control Basin where the plume terminates near well cluster CAMW16. The change in direction of the plume in this area may be associated with the location of the Central Avenue Fault, the “no-flow” boundary conditions of the Chino Hills, or historical pumping from former production wells. The width of the

Semiannual Status Report

Chino Airport Plume

October 2018

West TCE plumes ranges from 1,000 to 2,700 feet averaging 1,700 feet. The East TCE Plume has a significantly smaller footprint than the West Plume and extends approximately 1,650 feet in the south-southeast direction from its source in the area of CAMW33, 34 and 35.

1,2,3-TCP Plume. The West 1,2,3-TCP Plume extends roughly 10,500 feet towards the southwest and then extends another 3,300 feet to the southeast towards the Prado Flood Control Basin, following the same path as the West TCE Plume. The width of the West 1,2,3-TCP Plume ranges from 1,400 to 5,400 feet and averages about 3,300 feet. The East 1,2,3-TCP Plume has a significantly smaller footprint than the West Plume and extends approximately 3,000 feet to the south.

Regional Water Quality Control Board, Santa Ana Region (Regional Board) Regulatory Permits and Orders:

- Cleanup and Abatement Order (CAO) No. 90-134 – Issued to the County to address the groundwater contamination originating from the Chino Airport.
- CAO No. R8-2008-0064 – Required the County to define the lateral and vertical extent of the plume offsite and preparation of a remedial action plan (RAP).
- CAO No. R8-2017-0011 – Required the County to respond to Regional Board comments on the draft Feasibility Study and submit of a final Feasibility Study.

Regulatory and Investigation History: In 1990, the Regional Board issued CAO No. 90-134 to address groundwater contamination originating from the Chino Airport. From 1991 to 1992, ten inactive underground storage tanks and 310 containers of hazardous waste were removed, and 81 soil borings were drilled and sampled on the airport property. During 2003 to 2005, nine onsite monitoring wells were installed and used to collect groundwater quality samples. In 2007, the County conducted its first offsite groundwater characterization effort, which included 22 cone penetrometer tests (CPT) and direct push borings from which water quality samples were collected. In 2008, the Regional Board issued CAO No. R8-2008-0064 requiring the County to define the lateral and vertical extent of the plume and to prepare a remedial action plan. From 2009 to 2012, 33 offsite monitoring wells were installed at 15 locations to characterize the extent of the contamination downgradient from the airport property.

From 2013 to 2014 the County conducted an extensive investigation of several areas identified for additional characterization of the soil and groundwater contamination associated with the Chino Airport. The investigative work included: piezocone-penetrometer tests; vertical-aquifer-profiling (VAP) borings with depth-discrete groundwater sampling; soil-gas probe sampling; high-resolution soil sampling and analysis; real-time data analysis; and three-dimensional contaminant distribution modeling. When investigative work was complete, 33 groundwater monitoring wells were installed in 17 locations on and adjacent to the Airport property from September 2014 through February 2015.

Semiannual Status Report

Chino Airport Plume

October 2018

The County completed a Draft Feasibility Study³ for the Chino Airport in August 2016. The Feasibility Study identifies remedial action objectives (RAOs) for contaminated groundwater originating from the Chino Airport and evaluates remediation alternatives for mitigation. On January 11, 2017, the Regional Board issued CAO R8-2017-0011 to the County, which supersedes CAO R8-2008-0064. The order requires that the County: (1) submit a Final Feasibility Study within 60 days of receiving the Regional Board's comments on the Draft Feasibility Study; (2) submit a Final Remedial Action Plan (RAP) within 60 days of the Regional Board approval of the Final Feasibility Study; (3) implement the RAP in accordance with a Regional Board-approved schedule; and (4) prepare and submit technical reports and work plans as the Regional Board deems necessary. The Regional Board submitted final comments on the Draft Feasibility Study via email on February 8, 2017⁴. The County submitted responses to the Regional Board's comments along with a revised Draft Feasibility Study on March 20, 2017⁵. The Regional Board reviewed the revised Draft Feasibility Study and accepted the proposed changes and responses but submitted three additional comments on March 30, 2017.⁶

The County submitted a Final Feasibility Study⁷ for the Chino Airport in May 2017. The preferred remedial action identified in the Feasibility Study is a groundwater pump-and-treat system to provide hydraulic containment and treatment of both the West Plume and the East Plume. The Regional Board approved the Feasibility Study on June 7, 2017 and requested that a Remedial Action Plan (RAP) be prepared. The County submitted a *Preliminary Draft Remedial Action Plan* to the Regional Board on August 7, 2017. The Regional Board submitted comments on the Preliminary Draft RAP via email on October 17, 2017. The County submitted responses to the Regional Board's comments along with a revised Draft RAP on November 28, 2017. The Regional Board reviewed the revised Draft RAP and accepted the proposed changes and responses on December 14, 2017. The County submitted a *Draft Interim Remedial Action Plan* (IRAP)⁸ for public review and comment on December 18, 2017. In March 2018, the Regional Board extended the public comment period until April 18, 2018.

Remedial Actions: The preferred remedial action identified in the Final Feasibility Study and Draft IRAP is a groundwater pump-and-treat system consisting of ten extraction wells and an on-site granular activated carbon treatment system. The extraction wells are intended to produce approximately 900 gallons per minute (1,450 acre-feet per year) of groundwater. Included among the 10 extraction wells is the CDA's well I-18, which is no longer planned for use by the CDA. An air stripper may be added to the pump-and-treat system if deemed necessary. Once treated, the preferred

⁸ Tetra Tech (2017). *Draft Interim Remedial Action Plan*. Chino Airport, San Bernardino County, California. Prepared for County San Bernardino Department of Airports. December 2017.

Semiannual Status Report Chino Airport Plume October 2018

option is to discharge the treated groundwater to the CDA's Chino-I Desalter influent pipeline. If this discharge option is not available at the time the groundwater pump and treat system is completed, the alternative options are to discharge the treated groundwater to either the local surface-water channels or wastewater treatment plants, or to inject the treated groundwater back into the basin with six injection wells at the northeast corner of the Chino Airport. Currently, the County is in discussions with the CDA to discharge the treated water from the extraction system to the CDA's influent pipeline. The pump and treat system design and remedial action work plan is anticipated to be complete by spring 2019. Once constructed, operations are projected to begin in 2021.

The *Groundwater Well Installation and Aquifer Pumping Test Work Plan*⁹ was submitted to the Regional Board in July 2017. The work plan provides the details for the construction of two sets of pumping well clusters and 12 piezometers to perform aquifer pumping tests. Extracted groundwater generated during the aquifer pumping tests will be treated using granular activated carbon to remove contaminants, held temporary on-site in 20,000-gallon tanks until profiled, and then discharged directly to the ground surface via agricultural irrigation on the Chino Airport property. The data obtained from the aquifer pumping tests will be used to support the design of the full-scale groundwater pump and treat system proposed in the final Feasibility Study. The work plan also includes the plan for the construction of ten additional monitoring wells at select locations along the plume boundaries.

Monitoring and Reporting: The County conducts quarterly, annual, or biennial water-quality monitoring, and quarterly water-level monitoring, at the 75 monitoring wells constructed to date. The sampling frequency is determined by well classification, i.e. background wells, horizontal or vertical extent wells, remedial monitoring wells and guard wells. The purpose of the groundwater monitoring program is to collect data to track detections of VOCs in groundwater, monitor temporal trends of contaminants, and evaluate changes in each groundwater plume. All the data collected by the County is posted on the Regional Board's GeoTracker website¹⁰. Conclusions from the monitoring program can be found in the semi-annual reports posted on GeoTracker. The most recent monitoring report *Semiannual Groundwater Monitoring Report Summer and Fall 2017*¹¹ was submitted to the Regional Board in January 2018.

Watermaster collects groundwater-quality samples from private wells in the plume area, and at its HCMP-4 monitoring well, located in the southern portion of the plume. The Chino Basin Desalter Authority (CDA) collects groundwater-quality samples from its production wells located in the plume area. Watermaster uses data from the County, CDA, and its own sampling to perform an independent

⁹ Tetra Tech (2017). *Groundwater Well Installation and Aquifer Pumping Test Work Plan*. Prepared for the County of San Bernardino. July 2017.

¹⁰ http://geotracker.waterboards.ca.gov/profile_report.asp?global_id=SL208634049

¹¹ Tetra Tech (2018). *Semiannual Groundwater Monitoring Report Summer and Fall 2018*. Prepared for County of San Bernardino. January 2018.

Semiannual Status Report Chino Airport Plume October 2018

characterization of the areal extent and concentration of the TCE plume. The most recent characterization of the plume completed by Watermaster was in 2017 for the *2016 State of the Basin Report*¹² and is shown in Exhibit 1. The plume color ramp represents the most recent characterization of TCE and was delineated based on the five-year maximum concentrations from July 2011 to June 2016.

Recent Activity: In February 2018, the County began the installation of extraction wells and piezometers pursuant to the *Groundwater Well Installation and Aquifer Pumping Test Work Plan*. Between March and June 2018 pumping well clusters PW-1(A/B) and PW-2(A/B/C) and four piezometer wells clusters, PZ1(A/B), PZ2(A/B), PZ3(A/B) and PZ4(A/B) were installed. PW-1(A/B) and piezometer wells clusters PZ1(A/B) and PZ2(A/B) were completed within the center of the East Plume. PW-2(A/B/C) and piezometer wells clusters PZ3(A/B) and PZ4(A/B) were completed in the center of the West Plume approximately 400 feet north of CDA well I-2. Additionally, four monitoring well clusters (ten casings) were installed in March and April 2018. Exhibit 1 shows the locations of the new extraction wells, new piezometers, and new monitoring wells. Aquifer pumping tests at the extraction wells began in August 2018.

In April 2018 the following CEQA documents for the proposed remedial strategy were published: *Notice of Availability/Notice of Intent to Adopt a Mitigated Negative Declaration Chino Airport Groundwater Contamination Remedial Action Plan* and the *Initial Study Environmental Checklist Form*.^{13,14} The public review period for these documents ended on May 10, 2018. The County's response to comments is pending.

The County submitted a *Former Agricultural Well Destruction Work Plan*¹⁵ to the Regional Board in July 2018. The document detailed the procedures for destroying five abandoned/inactive agricultural wells located in the western portion of the airport property. As of September 21, 2018, three of the five wells had been destroyed, and destruction activities for the fourth well had begun. The fifth well is being considered for use in irrigating a sod far. A determination of whether to use the well or proceed with destruction is on hold until the County completes the calibration of the transient flow model in early 2019 and performs modeling of pumping scenarios to evaluate the impact of its use on the plume footprint. Upon completion of this evaluation the County will discuss the proposed plans for destruction of this well with the Regional Board.

South Archibald Plume

October 2018

Contaminant: The primary contaminant is trichloroethene (TCE). The maximum contaminant level (MCL) for TCE is 5 micrograms per liter ($\mu\text{g/l}$). The maximum TCE concentration detected in a groundwater sample collected from wells within the plume during the last five years (2013 to 2018) is 90 $\mu\text{g/l}$. Other contaminants of concern include: acetone, cis-1,2-dichloroethene, chloroform, and bromodichloromethane.

Location: The South Archibald TCE plume is in the southern Chino Basin within the City of Ontario. As delineated by the Chino Basin Watermaster (Watermaster) in 2017 for the *2016 State of the Basin Report*¹, the extent of the plume with detectable TCE concentrations is about 11,000 feet wide and 22,400 feet long, extending from State Route 60 on the north to Bellegrave Ave. to the south, between Haven and Turner Avenues on the east, and Grove Avenue on the west. The spatial extent of the TCE contamination was delineated based on the five-year maximum concentration measured over the period of July 2011 to June 2016. In December 2017, the Cities of Ontario and Upland delineated the extent of the plume with TCE concentrations greater than or equal to 0.5 $\mu\text{g/l}$ based on sampling events that occurred between September and November 2017. Both plume delineations are shown in Exhibit 1.

Regional Water Quality Control Board, Santa Ana Region (Regional Board) Regulatory Orders:

- 2005 Draft Cleanup and Abatement Orders (CAOs)— Six CAOs were issued, one each to the following parties: the Aerojet-General Corporation, The Boeing Company, Northrop Grumman Corporation, Lockheed Martin Corporation, General Electric Corporation and the United States Department of Defense.
- 2012 Draft CAO – This CAO was issued jointly to City of Ontario, City of Upland, and Inland Empire Utilities Agency (IEUA)
- Stipulated Settlement and CAO No. R8-2016-0016² - Final CAO issued to all parties previously issued draft CAOs in 2005 and 2012, excluding Northrop Grumman.

Regulatory and Monitoring History: In the mid-1980s, the Metropolitan Water District of Southern California determined that TCE was present in private wells in the southern Chino Basin as part of its work associated with the Chino Basin Storage Program. The Regional Board confirmed this with subsequent rounds of sampling.

The Regional Board issued Draft CAOs in 2005 for six different parties who were tenants on the Ontario Airport property. On a voluntary basis, four of the parties—Aerojet-General Corporation,

Semiannual Status Report

South Archibald Plume

October 2018

The Boeing Company, General Electric Company, and Lockheed Martin Corporation, collectively the ABGL parties, worked together, along with the U.S. Department of Defense, to investigate the source of the contamination. Part of the investigations included collecting water-quality samples from private wells and taps at residences, and the construction and sampling of four triple-nested monitoring wells. Alternative water systems were provided at private residences in the area where groundwater was contaminated with TCE.

In 2008, Regional Board staff conducted research pertaining to the likely source of the TCE contamination and identified discharges of wastewater that may have contained TCE to the RP-1 treatment plant and associated disposal areas to be a potential source. The Regional Board identified several industries, including some previously identified tenants of the Ontario Airport property, that likely used TCE solvents before and during the early-1970s, and discharged wastes to the Cities of Ontario and Upland sewage systems tributary to the RP-1 treatment plant and disposal areas. In 2012, an additional Draft CAO was issued by the Regional Board jointly to the City of Ontario, City of Upland, and the IEUA as the previous and current operators of the RP-1 treatment plant and disposal area (collectively the RP-1 parties).

Under the Regional Board's oversight from 2007 to 2014, the ABGL parties and/or the RP-1 parties conducted sampling at private residential wells and taps approximately every two years in the region where groundwater is potentially contaminated with TCE. By 2014, all private wells and/or taps in the area of the plume had been sampled at least once since 2007. The report documenting this data was published in November 2014³. Both the ABGL and RP-1 parties provided water tank systems where water is delivered from the City of Ontario's potable supply via truck deliveries, to residences in the area where well water contains TCE at or above 80 percent of the MCL for TCE (e.g. equal to or greater than 4 µg/l). Residents who declined tank systems were provided bottled water service.

In July 2015, the RP-1 parties completed a draft feasibility study report for the South Archibald plume (Feasibility Study)⁴. The Feasibility Study established clean-up objectives for both domestic water supply and plume remediation and evaluated alternatives to accomplish these objectives. In August 2015, a draft remedial action plan (RAP) was concurrently prepared by the RP-1 parties⁵ to present the preferred plume remediation and domestic water supply alternatives. A public review period followed along with two community meetings in September 2015 to educate the public about the plume, the Feasibility Study and the RAP, and to solicit comments on these reports. In November

October 2018

2015, a revised Draft Feasibility Study⁶, RAP⁷, and responses to comments were completed to address input from the public, ABGL, and other parties.

In September 2016, the Regional Board issued the Final Stipulated Settlement and CAO R8-2016-0016 (Stipulated CAO) collectively to the RP-1 parties and the ABGL parties (excluding Northrop Grumman). The Stipulated CAO was adopted by all parties in November 2016, thus approving the preferred *Plume Remediation* and *Domestic Water Supply* alternatives identified in the RAP. The parties also reached a settlement agreement that aligns with the Final CAO and authorizes funding to initiate implementation of the plume remediation alternative.

Remedial Action Plan:

Plume Remediation. The plume remediation alternative identified in the Feasibility Study, RAP and Final CAO involves the use of existing and proposed Chino Basin Desalter Authority (CDA) wells and treatment facilities. The RP-1 parties and the CDA reached a Joint Facility Development Agreement⁸ for implementation of a project designed to remediate the South Archibald plume. The proposed project includes the construction and operation of three new CDA wells (II-10, II-11, and II-12) a dedicated pipeline to convey groundwater produced from these wells to the Desalter II treatment facility that removes TCE and other VOCs via air stripping. Existing CDA well I-11 would also be plumbed into the air-stripping treatment facility as part of the project. The CDA completed construction of Wells II-10 and II-11 in 2015 and the wells were equipped for operation in mid-2018. Both the dedicated raw water pipeline construction and the property acquisition for Well II-12 are underway. The overall project is anticipated to be completed and operational by 2020.

Domestic Water Supply. The domestic water supply alternative identified in the Feasibility Study and RAP is a hybrid between the installation of tank systems for some residences where water is delivered from the City of Ontario potable supply, and the installation of a pipeline to connect some residences to the City of Ontario potable water system. Pursuant to the Stipulated CAO, the Cities of Ontario and Upland have assumed the responsibility for implementing the domestic water supply alternative for those private residences affected by the TCE groundwater contamination (TCE greater than 4 µg/l) who are currently receiving bottled water. In February 2017, the Cities of Ontario and Upland submitted a *Domestic Water Supply Work Plan*⁹ to the Regional Board that outlined the approach to provide water tank systems or a connection to the City of Ontario's municipal water supply system

South Archibald Plume

October 2018

for affected residences currently receiving bottled water. The Regional Board approved¹⁰ the work plan on March 3, 2017. At the time of the work plan approval, 32 residences were already using tanks systems that were previously installed and 21 residences were receiving bottled water. The work plan addressed providing new offers for alternative water supply remedies for the 21 residences that were receiving bottled water. The alternative water supply options included: installation of a tank system; connection to an existing City of Ontario water main; connection to a future City of Ontario water main; or remain on bottled water. In accordance with the schedule in the Stipulated CAO and the work plan, tank systems will be installed within six months of resident consent, connections to Ontario's existing municipal water system will be constructed within three months of resident consent, and construction and connection to a new water main will occur within 18 months of resident consent. Additionally, bottled water will be supplied to any newly affected residents immediately upon determining that TCE is present at concentrations greater than 4 µgl.

Monitoring and Reporting: Pursuant to the Stipulated CAO, the Cities of Ontario and Upland are responsible for coordinating and conducting ongoing monitoring of the plume and submittal of an annual plume monitoring report to Regional Board by December 31 of each year. Pursuant to the November 2016 Stipulated CAO, a *Private Water Supply Well Sampling Work Plan*¹¹ was submitted to the Regional Board in February 6, 2017 and approved on February 14, 2017.¹² The purpose of the sampling is to track the plume extent, and potentially affected residences, to ensure that that an alternative water supply is provided to residences where TCE concentrations are greater than 4 µgl. Pursuant to the February 2017 work plan, the first round of sampling occurred in February and March 2017 and the results were reported in the *Annual Groundwater Monitoring Report*¹³ submitted to the Regional Board on May 15, 2017.

In December 2017, the Cities of Ontario and Upland submitted results from the second round of sampling in the *Annual Groundwater Monitoring Report*¹⁴ for monitoring conducted between September and November 2017. Forty-two samples were collected from 41 residential or agricultural locations located within and or downgradient of the historical footprint of the plume. Samples were collected

South Archibald Plume

October 2018

from an outside tap, an inside faucet, or from the supply well. The report also included 2017 water quality data obtained from CDA's routine quarterly sampling at wells I-9, I-10, I-11, II-10 and II-11.

Additionally, Watermaster routinely collects groundwater samples at private wells in the plume area. Watermaster uses data obtained from their own monitoring efforts together with other sources of publicly available data to independently delineate the South Archibald TCE plume as part of the Chino Basin State of the Basin Reports that are prepared every two years.

Recent Activity: The most recent monitoring event was conducted by the RP-1 Parties from September to November 2017. The next annual monitoring event is scheduled for Fall 2018.

Domestic Water Supply. As of December 2017, 37 residences are supplied water by tank systems. Seven of these tanks are located at the western edge of the plume, where TCE concentrations have declined over time and are less than 80 percent of the MCL. Multiple residences remain on bottled water supply and the need for another offer of an alternative water supply for these residences will be evaluated following the next sampling event scheduled for Fall 2018.

Plume Remediation. CDA and IEUA continue to negotiation property access for construction of well II-12 with the private land owner of the selected construction site. The property access agreement has taken longer than expected due to extenuating circumstances and has caused delays in the advancement of various project activities in the Stipulated CAO that are dependent on acquiring the well II-12 site. These tasks include: design and construction of well II-12; design and construction of the raw water pipeline to connect well II-12 to the Desalter II treatment facility; and design and construction of the decarbonator modification. In June 2018, a request¹⁵ to modify the project schedule was submitted to the Regional Board for these project tasks. The Regional Board approved the request in July 2018.^{16,17}

The construction of well II-12 is expected to begin in 2019 and completed by mid-2020. The completion of the dedicated pipeline to convey groundwater from the three new wells and existing well I-11 is on hold until the land acquisition process for well II-12 and its pipeline is complete. The overall project is anticipated to be operational by 2020.

CBWM Semi-Annual Status Report

South Archibald TCE Plume

Exhibit 1

Annual Status Report
GE Flatiron Plume
October 2018

Contaminants: The primary contaminant is trichloroethene (TCE). The maximum contaminant level (MCL) for TCE is 5 micrograms per liter ($\mu\text{g/l}$). The maximum TCE concentration detected in groundwater samples collected from wells within the plume from July 2013 to June 2018 was 20,000 $\mu\text{g/l}$ (measured at well MW-22A in April 2018). Other contaminants of concern (COCs) include tetrachloroethylene (PCE), total chromium, hexavalent chromium, 1,1,1-trichloroethane and 1,1,2-trichloroethane.

Location: The General Electric (GE) Flatiron TCE plume is in the northern Chino Basin within the City of Ontario. It extends south-southwest from the historical footprint of the GE Flatiron Facility, which was located at 234 East Main Street. As delineated by the Chino Basin Watermaster (Watermaster) in the *2016 State of the Basin Report*,¹ the extent of the plume with TCE concentrations greater than 5 $\mu\text{g/l}$ measures approximately 3,150 feet wide and extends 9,000 feet south-southwest (hydraulically downgradient) from the Flatiron Facility. Exhibit 1 shows the location and extent of the TCE plume as delineated by Watermaster and by GE in 2016². Note that both delineations do not include data from newly installed well clusters MW-19A/B/C, MW-20A/B/C, MW-21, MW-22A/B, MW-23A/B, and MW-24A/B. Incorporation of this data for an updated delineation of the plume extent will be prepared by the Watermaster for the upcoming *2018 State of the Basin Report* and will demonstrate the TCE plume extends downgradient of the 2016 delineations towards well cluster MW-20A/B/C based on the data collected at the newly installed wells.

Site History: GE manufactured clothes irons at the Flatiron Facility from the early 1900s to 1982. During World War II, the facility was also used to manufacture equipment to support the war effort for the U.S. War Department. GE closed the facility and sold the property in 1982; since then, ownership has changed several times. The property is currently owned by Oakfield Realty Partners, LLC and is part of an industrial park.

Regional Water Quality Control Board, Santa Ana Region (Regional Board) Regulatory Permits and Orders:

- Investigative Order No. 87-146 – Requiring characterization of on-site conditions and groundwater beneath and down-gradient of the GE Flatiron site using gas surveys, soil boring installation and sampling, and groundwater monitoring well installation and sampling.
- Waste Discharge Requirements (WDRs) and Monitoring and Reporting Programs (M&RPs) Order No. 95-62 and R8-2011-0019 (current) – General WRDs and M&RPs for the discharge of treated water from the pump and treat system.

Regulatory and Investigation History: In 1987, groundwater-quality samples collected from an inactive City of Ontario municipal production well downgradient of the site had TCE and chromium concentrations above drinking water standards, prompting the Regional Board to request that GE

October 2018

prepare a Phase I investigation to determine if the Flatiron Facility was the source of the contaminants detected. The results of the Phase I investigation prompted the Regional Board to issue Investigation Order No. 87-146, requiring GE and West End Investments (the property owner at the time) to characterize on-site conditions and the groundwater flow gradient beneath the Flatiron Facility. The Phase II through V^{3,4,5,6} investigations included soil gas surveys, soil boring installation and sampling, and groundwater monitoring well installation and sampling to define the extent of COCs in groundwater both on and offsite. These investigations conducted from 1987 to 1992, indicated that a contaminant plume was present beneath and downgradient of the Flatiron Facility and showed that concentrations of TCE and total chromium in groundwater were above the California primary MCLs of 5 and 50 µg/l, respectively.

The results from the multi-phase investigation prompted the proposal of an interim remedial measure (IRM) in 1993. The IRM was based on the conceptual site model in the *Interim Measure-Preliminary Design Report*.⁷ Local and regional numerical groundwater models were constructed to provide a basis for the design of the IRM and extraction well options for containment near the downgradient extent of the plume. Extraction well (EW-01) was installed in December of 1993, and one monitoring well and three piezometers were installed nearby to provide observation points during aquifer testing at EW-01. The IRM began in 1996 and included pumping groundwater from EW-01, treating for TCE and other contaminants, and discharging the treated groundwater to the Ely Basins for recharge.

A Feasibility Study⁸ was completed in 1995 prior to the start of the IRM to evaluate groundwater and soil remediation alternatives. In October of 1997, the Regional Board approved a remediation alternative that included the ongoing use of extraction well EW-01 and the installation of an additional extraction well (EW-02) near the center of the contaminant plume to pump and treat contaminated groundwater. Extraction well EW-02 was constructed in 1999 and went online in 2002.

The Regional Board issued WDR Order No. 95-62 in 1995 to regulate the discharge of treated water from the pump and treat system to Ely Basin. This order was replaced with WDR Order R8-2011-0019⁹ in 2011 to discharge the treated groundwater to the Chino Basin via injection wells. The 2011

GE Flatiron Plume
October 2018

WDR outlines the current discharge prohibitions, effluent limitations, and required monitoring and reporting program.

In 2015, GE submitted a Work Plan¹⁰ to the Regional Board to outline a program for evaluating the effectiveness of existing remedial measures and to provide recommendations for additional investigation or remediation. Implementation of the Work Plan began in 2016 with the installation of four borings to collect discrete-depth soil and groundwater samples that were tested for TCE, PCE, chromium, and hexavalent chromium.

The Regional Board required the development of a Conceptual Site Model¹¹ in 2016 to incorporate the information from the recent investigations with all historical information to develop a framework to be used to identify data gaps and guide future decisions on investigation, monitoring, and remedial actions. One critical component of the Conceptual Site Model, as highlighted by the Regional Board, is the installation of a sentinel well downgradient of the plume.

On June 22, 2016, a Work Plan¹² was submitted to the Regional Board, outlining the installation of a new-multi-depth well cluster (MW-19A/B/C), to further assess the dissolved-phase chromium and VOC concentrations in the downgradient direction. The first sampling event at well cluster MW-19A/B/C indicated that the TCE concentration in the shallow casing (MW-19A) was greater than the MCL. This finding prompted the Regional Board to request that an additional monitoring well cluster be constructed downgradient of MW-19 and upgradient of the City of Chino's municipal production well Chino-11 to allow for further evaluation of the plume extent. On November 14, 2016, GE submitted the Work Plan¹³ for the construction of well cluster MW-20A/B/C about 420 feet upgradient from Chino-11. Construction was completed in May 2017. The first sampling event at well cluster MW-20A/B/C in July 2017 indicated that TCE in the intermediate casing (MW-20B) was greater than the MCL.

From May 2016 to March 2017, four additional monitoring well clusters (MW-21, MW-22A/B, MW-23A/B and MW-24A/B) were constructed in the upgradient area of the plume as part of the supplemental remedial investigation activities.

Remedial Action Plan: In 1996 GE began operation of a groundwater extraction and treatment system to contain and treat the contaminated groundwater. In 1996, GE began operating extraction well EW-1 at the leading edge of the contaminant plume to prevent further migration of the plume. In 2002, GE began operating extraction well EW-2 located in the center of the plume to prevent migration of the contaminants past the mid-point of the plume. Groundwater pumped from EW-1

Annual Status Report
GE Flatiron Plume
October 2018

and EW-2 is conveyed by separate pipelines to the GE Flatiron Facility treatment system located at 501 W. Francis Street. The groundwater is treated first with an ion exchange resin and then with liquid-phase granular activated carbon to reduce chromium and VOC concentrations before being discharged. As detailed in WDR Order No. R8-20011-0019, discharged water from the treatment system is required to maintain average monthly concentrations of TCE, PCE, 1,1,1-trichloroethane, and chromium below their respective MCLs of 5, 5, 200 and 50 µg/l. From 1996 to 2011, the treated groundwater was discharged via a pipeline to the Ely Basins flood control and groundwater recharge facility. In 2005, long term recharge plans by the Watermaster and Inland Empire Utilities Agency placed a priority on the use of the Ely Basins for recharge of storm water, recycled water and imported water. It was expected that the Ely Basins would be fully allocated to these sources of recharge waters in the future. In 2005, GE began evaluating alternative discharge options for the treated groundwater. A site was selected at 2025 South Bon View Avenue to install injection wells to accept the treated groundwater. Three injection wells (IW-01, IW-02, and IW-03) and conveyance pipelines were completed in July 2011 and began receiving treated waters from the treatment system.

Exhibit 1 shows the locations of the extraction and injection wells. As of August 2018, approximately 17,539 acre-feet of water has been treated at the treatment system.¹⁴

Monitoring and Reporting: There are two interlinked monitoring and reporting programs for the GE Flatiron site: one for groundwater and one for the remediation system. The objectives of the respective programs are: 1) to monitor groundwater elevations and concentrations/extents of the dissolved-phase plume over time, and 2) track and evaluate the performance of the remediation system. The groundwater monitoring program includes measuring groundwater levels and collecting groundwater-quality samples for chemical analysis from site wells at a quarterly frequency. Currently, the depth to groundwater is measured in 31 wells and three piezometers every quarter. Groundwater-quality samples are collected from between 21 and 34 monitoring wells and piezometers, dependent on the specific quarter's monitoring plan and analyzed primarily for dissolved metals and VOCs. Reports summarizing the results of the monitoring and remediation efforts are published semiannually in January and July each year.

The remediation system monitoring program consists of operations and maintenance activities performed in conjunction with the entire system, and at a minimum, monthly sampling and analyses of the treatment plant influent and treated effluent pursuant to WDR Order No. R8-2011-0019. In addition to the semiannual summaries included in the groundwater monitoring reports, treatment system monitoring results are reported monthly to the Regional Board. Semiannual groundwater monitoring and remediation reports, monthly treatment system summary reports, and other relevant documents/data can be found on the Regional Board's GeoTracker website.¹⁵

Recent Activity: The six new monitoring well clusters (13 wells) installed during 2016 and 2017 either onsite in the northern extent of the plume or downgradient of the plume (see Exhibit 1) were

¹⁴ General Electric (2018). *GE Flatiron Facility Treatment System Summary*- August 2018. E-mail prepared for Santa Ana Regional Water Quality Control Board. August 30, 2018.

¹⁵ https://geotracker.waterboards.ca.gov/profile_report?global_id=SL0607132486

Annual Status Report
GE Flatiron Plume
October 2018

monitored quarterly for groundwater quality from January 2017 to April 2018. The monitoring results show that TCE was present at concentrations above the MCL in at least one well in all six well cluster locations. The table below summarizes the highest TCE concentrations from January 2017 to April 2018 for these wells:

New Monitoring Wells with TCE concentrations Above the MCL of 5 µg/L

Well Name	Well Location	Sample Date	TCE (µg/L)
MW-21	Northern Extent of Plume	1/31/2018	4,200
MW-22A	Northern Extent of Plume	4/27/2018	20,000
MW-22B	Northern Extent of Plume	4/27/2018	15
MW-23A	Northern Extent of Plume	1/31/2018	12,000
MW-23B	Northern Extent of Plume	4/27/2018	75
MW-24A	Northern Extent of Plume	8/2/2017	15,000
MW-19A	Downgradient of Southern Extent of Plume	3/22/2017	8.7
MW-20B	Downgradient of Southern Extent of Plume	1/30/2018	36

GE has not prepared an updated plume delineation since their 2016 conceptual site model¹⁶ to include analytical results from the new monitoring wells. Updated delineations of the TCE plume are expected to extend approximately 2,800 feet downgradient from the 2016 extent towards well cluster MW-20A/B/C.

On June 21, 2018 GE submitted a work plan to the Regional Board for an expansion of the soil vapor extraction system currently being implemented at the site.

The most recent groundwater monitoring report¹⁷ was submitted to the Regional Board on July 24, 2018. This report summarizes the groundwater monitoring and remediation activities performed between January 1 and June 30, 2018. The following describes the key findings presented in the document:

- Groundwater elevations appear to be increasing in the vicinity of the site.
- Except for wells MW-06 and MW-09, VOC and dissolved metals concentrations in samples collected from the site monitoring wells during the reporting period were consistent with historical data.
- The highest TCE, PCE, total chromium and hexavalent chromium concentrations detected during the monitoring period were: 20,000 µg/L (MW-22A), 970 µg/L (MW-21), 1,490 (MW-23A), and 1,600 µg/L (MW-23A), respectively.
- The extraction wells have been generally effective at meeting the remedial action objectives.

GE Flatiron Plume
October 2018

- The injection well field has been effective in returning treated groundwater to the upper aquifer of the Chino Subbasin.
- The results of compliance monitoring indicate the groundwater treatment system was in compliance with discharge limitations described in the WDRs.

GE will continue monitoring at the Flatiron Facility pursuant to the Regional Board Clean-up Status of *Open – Assessment & Interim Remedial Action*.

Annual Status Report
GE Test Cell Plume
October 2018

Contaminants: The primary contaminant is trichloroethene (TCE). The maximum contaminant level (MCL) for TCE is 5 micrograms per liter ($\mu\text{g/l}$). The maximum TCE concentration detected in a groundwater sample collected from wells within the plume during the from the last five years (July 2013 to June 2018) is 1,500 $\mu\text{g/l}$ (measured at well OW-15pi in January 2018), which is the highest concentration of TCE ever measured at a well within the plume. Other contaminants of concern include: tetrachloroethene (PCE), 1,1-dichloroethene, 1,2-dichloroethane, and cis-1,2-dichloroethene.

Location: The General Electric (GE) Test Cell plume is in the northern Chino Basin within the City of Ontario. The plume is elongated in shape and extends downgradient in a southwest direction from the former GE Jet Engine Test Cell Facility (Test Cell Facility), located at 2264 Avion Street. The site is located approximately a mile northeast of the Ely recharge basins. The land uses overlying the plume are predominately industrial and commercial. As delineated by the Chino Basin Watermaster (Watermaster) in the *2016 State of the Basin Report*,¹ the extent of the plume with TCE concentrations greater than or equal to 0.5 $\mu\text{g/l}$ measures approximately 2,300 feet wide and 9,800 feet long. Exhibit 1 compares the location and extent of the plume as delineated by Watermaster, and by GE per their most recent characterization published in the second quarter of 2018².

Site History: From 1956 to 2011, the Test Cell Facility was predominately used to test and maintain commercial and military aircraft engines. Solvents used at the facility included TCE, PCE, 1,1,1-trichloroethane (1,1,1-TCA), methyl ethyl ketone, and isopropyl alcohol, which were stored in 55-gallon drums and an aboveground storage tank. In the early 1970s, TCE was replaced with the use of 1,1,1-TCA, which in 1981 was replaced with isopropyl alcohol—the only solvent used onsite until 1996. Prior to 1974, wastewater from manufacturing processes flowed into the natural wash along the north side of the facility until two dry wells were constructed on the northwest side of the former Test Cell Facility. From 1974 to 2011, wastewater from manufacturing was disposed of by discharging to the onsite dry wells. The Test Cell Facility ceased operation in 2011, and the site is currently vacant.

Consent Order: State of California Department of Health Services (CDHS) Docket No. 88/89-009CO. Consent Order Health and Safety Code Section 25355.5(a)(1)(B) and 25355.5 (a)(1)(C). In the Matter of: General Electric Engine Maintenance Center. September 1998.

Regulatory and Monitoring History: An investigation performed by C.H.J, Inc. soil engineers in 1984 detected TCE, PCE, dibromochloromethane, and 1,1,1-TCA in soil samples taken from the dry wells. Results from this investigation were deemed invalid due to inappropriate analytical

methods.³ In 1985, another consulting firm retained by GE detected 1,1,1-trichloroethane, TCE, and PCE in subsurface soils onsite.⁴ An investigation performed in 1987 revealed the presence of volatile organic compounds (VOCs) in the soil near the disposal sites.⁵ In 1988, the Consent Order was signed between GE and the CDHS to initiate the investigation of soil, surface water, and groundwater contamination, and the appropriate remedial actions. The Santa Ana Regional Water Quality Control Board (Regional Board) oversees the groundwater investigation and remediation efforts.

Pursuant to the Consent Order, GE began groundwater investigations in 1991 with the installation of onsite monitoring wells adjacent to the two dry wells used to discharge untreated wastewater. The monitoring performed at these wells indicated the presence of VOCs in the groundwater beneath the Test Cell Facility and that the contamination had possibly migrated offsite. The Regional Board requested an offsite investigation to determine the extent of the contamination. An extensive offsite investigation was completed in multiple phases from 1995 to 1998. The initial phase was completed in March 1995 and included the installation of three offsite monitoring wells. Moreover, in late 1995, five borings were drilled to determine the horizontal and vertical limits of VOCs in groundwater, and three of the five borings were completed as monitoring wells. Monitoring at these offsite monitoring wells indicated that the VOC plume extended about 4,000 feet offsite. Between 1996 and 1998, seven additional monitoring wells and seven piezometers were constructed offsite.

Following the initial groundwater investigation, two offsite multi-depth well clusters were installed between 2001 and 2002 to provide information on the vertical distribution of VOCs. Monitoring of these multi-depth wells indicated that TCE concentrations were highest in the intermediate and deep interval zones. In 2003, GE submitted a groundwater feasibility study to the Regional Board (Feasibility Study),⁶ followed by a draft remedial action plan (RAP)⁷ in 2006. The Feasibility Study and RAP identified pump and treat and monitored natural attenuation as remediation alternatives.

In 2009, additional multi-depth well clusters were installed at two locations offsite and one location onsite.⁸ And, pursuant to a 2014 work plan approved by the Regional Board, GE destroyed six

monitoring wells that were dry and replaced them with an additional onsite multi-depth well cluster.

Remedial Action Plan: The 2003 Feasibility Study⁹ and 2006 draft RAP¹⁰ identified two groundwater remediation alternatives: (1) extraction and treatment of groundwater for areas that have VOC concentrations approximately ten times the MCL and (2) monitored natural attenuation of groundwater for areas that have VOC concentrations less than ten times the MCL. Plans to implement a groundwater pump-and-treat system were put on hold after the draft RAP was submitted because the only suitable location for discharging the treated effluent was the nearby Ely recharge basins, and GE could not obtain capacity at the recharge basin from the San Bernardino Flood Control District. Monitored natural attenuation is the only remedial action that has been implemented.¹¹

From 2003 to about 2012, TCE concentrations in samples collected from monitoring wells across the extent of the plume generally decreased; this trend was attributed to natural attenuation. In 2002, TCE concentrations above 50 µg/l were measured as far as about 4,000 feet downgradient of the facility. By 2008, groundwater with TCE concentrations above 50 µg/l only extended about 2,600 feet downgradient. GE met with the Regional Board in 2008 to discuss the status of the plume and to reevaluate the RAP to consider monitored natural attenuation (MNA) as the primary remedial action. Based on this discussion, GE agreed to install additional monitoring well clusters between the former GE facility and well cluster OW-16, located in the center of the plume. This well was selected because it had the highest historical offsite TCE concentrations in the intermediate and deep intervals. Pursuant to this agreement, two offsite well clusters (OW-17 and OW-18) and one onsite well cluster (MW-8) were installed in August and September 2009 as part of ongoing activities to evaluate MNA. The 2006 Draft RAP was withdrawn in February 2010 and evaluation of MNA continued.

In November 2010, GE met with the Regional Board again to reevaluate MNA and as a result the Regional Board required that GE prepare a work plan to destroy and/or replace monitoring wells that had gone dry since their construction. GE submitted a work plan¹² for the destruction of five onsite wells and one offsite well and the construction of a well cluster onsite to replace the

Annual Status Report
GE Test Cell Plume
October 2018

monitoring wells that had gone dry. The work plan was approved by the Regional Board in 2011 and implemented in 2014.

Monitoring and Reporting: The objectives of the monitoring program are to evaluate the extent and magnitude of the VOC plume emanating from the Test Cell Facility and to support the ongoing evaluation of MNA as a remedy. Groundwater monitoring is performed quarterly and consists of measuring groundwater levels and collecting groundwater samples at all accessible onsite and offsite monitoring wells and piezometers. This includes 13 single casing monitoring wells, 17 multi-nested monitoring wells in six locations, and seven piezometers. Exhibit 1 shows the locations of all monitoring sites. Quarterly groundwater-quality samples are analyzed for VOCs, including TCE, PCE, chloroform, benzene, and others. Reports summarizing the results of the monitoring are published each quarter. All data that have been collected by GE since 2005 are posted on the Regional Board's GeoTracker website.¹³ Conclusions from the monitoring program can be found in the quarterly reports posted on GeoTracker.

Recent Activity: During the second quarter of 2018, groundwater quality samples were collected at 31 monitoring wells, and groundwater-level measurements were obtained from 35 monitoring wells. The monitoring event was conducted in April 2018 and the report documenting the sampling event and results was submitted to the Regional Board in July 2018¹⁴. The following summarizes some of the key results and conclusions contained in the second quarter report:

- Variations in the IEUA's timing and volumes of recharge at the Ely Basins influence the local horizontal hydraulic gradient and groundwater flow direction, including the area that comprises the central portion of the plume that is directly north of the Ely Basins. However, in any given year, the general horizontal hydraulic gradients remain relatively constant despite long-term changes in groundwater levels and seasonal changes in recycled water recharge at the Ely Basins of up to five feet.
- Over the last four years, significant increases in TCE concentrations have been observed in well OW-6 and well cluster OW-15, located near the center of the plume, north of the Ely Basins where large fluctuations of hydraulic gradient have also occurred.
- There are increasing trends in TCE concentrations at monitoring wells OW-8, OW-9p and OW-17-S. These wells are primarily located in the central and northern portions of the plume and downgradient of the former Test Cell Facility.
- The highest TCE concentration measured is at the intermediate interval of well cluster OW-15 located in the center of the plume. The TCE concentration at this well showed a increasing trend from the fourth quarter of 2013 to the second quarter of 2018, increasing

Annual Status Report
GE Test Cell Plume
October 2018

from 140 µg/l to 1,400 µg/l. The maximum peak concentration of 1,500 µg/l was observed in the first quarter of 2018.

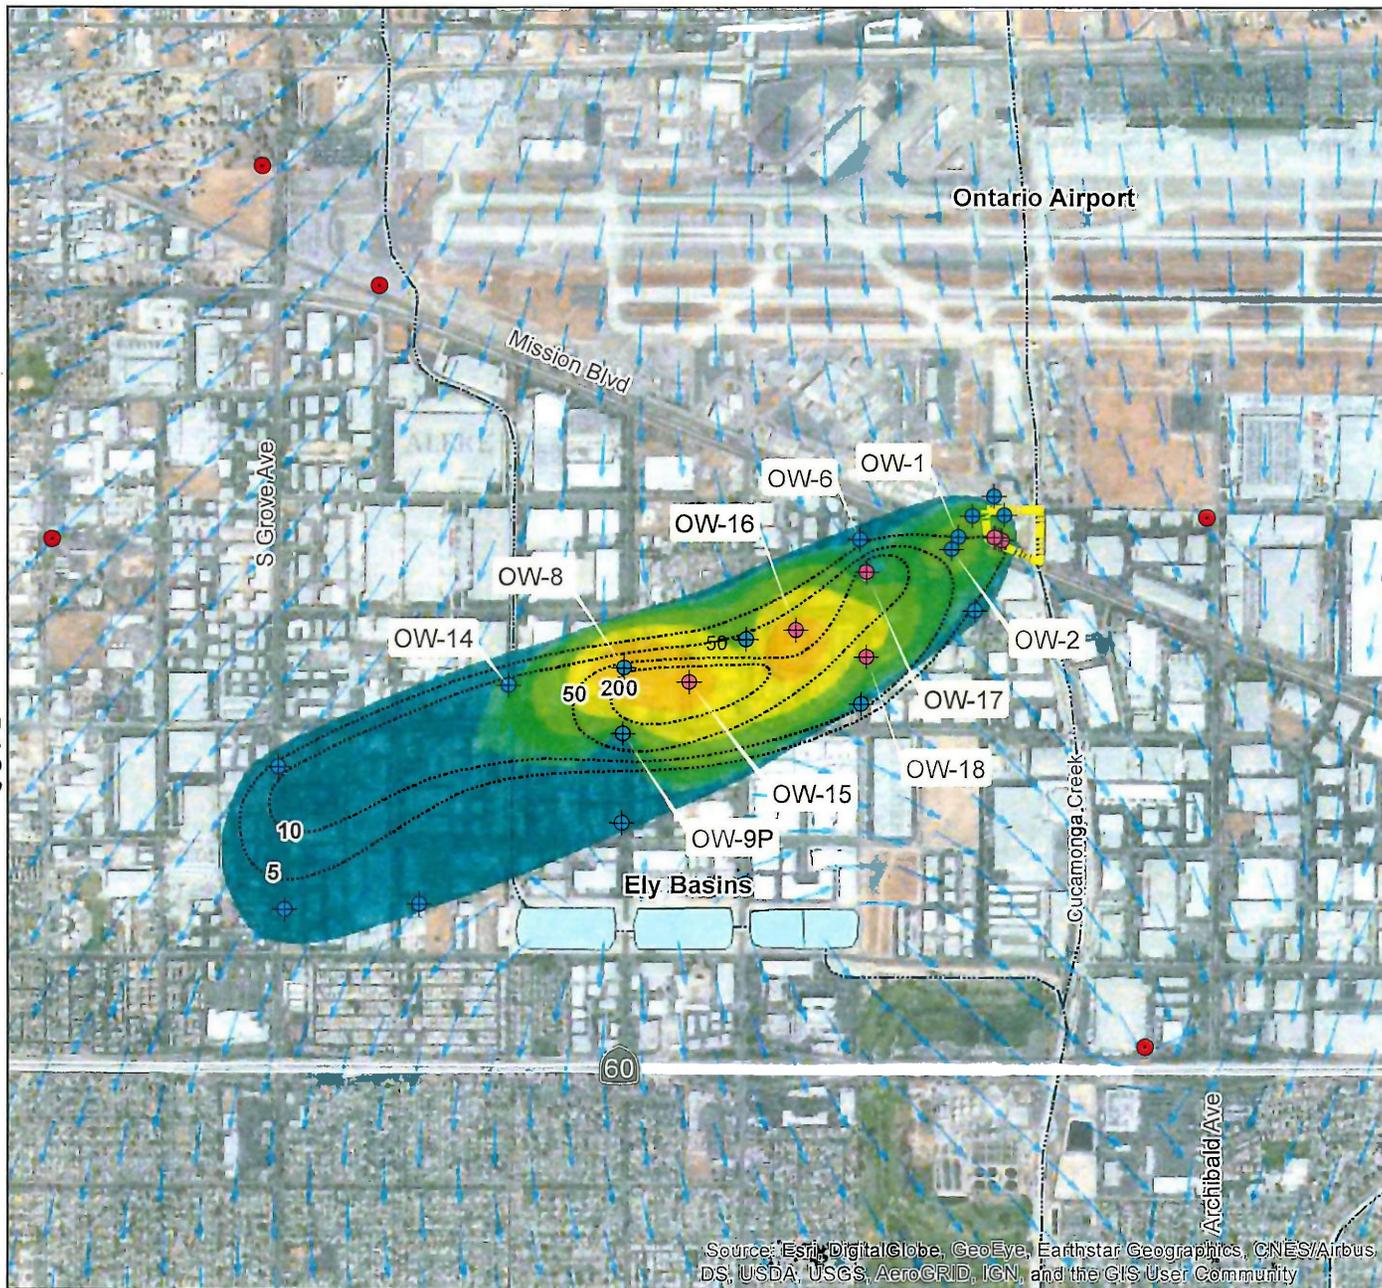

- Over the last year, increasing TCE concentrations have been observed at OW-14 and OW-16i, also located in the center of the plume.
- Over the past six years, TCE concentrations at the two monitoring wells just downgradient of the former Test Cell facility (OW-1 and OW-2) have gradually declined and are significantly lower than historical concentrations observed in these monitoring wells.
- Approximately 71 percent of the wells that are being monitored have TCE concentrations above the MCL.

GE will continue monitoring pursuant to the Regional Board Clean-up Status of *Open – Verification Monitoring*. The third quarter 2018 monitoring event was performed in July 2018 and the monitoring report will be submitted to the Regional Board by GE in October 2018. Upon review of the third quarter 2018 monitoring report, the Regional Board will schedule a time to meet with GE and evaluate if remediation actions other than MNA are required to address the increasing TCE concentrations found in wells at the center of the plume.¹⁵

Plume Status Report

GE Test Cell TCE Plume

Exhibit 1

Annual Status Report
California Institution for Men Plume
October 2018

Contaminants: The primary contaminant is tetrachloroethene (PCE). The maximum contaminant level (MCL) for PCE is 5 micrograms per liter ($\mu\text{g/l}$). The highest concentration of PCE historically measured at a well within the plume is 1,990 $\mu\text{g/l}$ (MW-7 in 1998). Other contaminants of concern include the following volatile organic compounds (VOCs): trichloroethene (TCE), 1,2-dichloroethene, bromodichloromethane, 1,1,1-trichloroethane, carbon tetrachloride, chloroform, and toluene.

Location: The California Institution for Men (CIM) is a state correctional facility located in the City of Chino. The property occupies approximately 1,500 acres. CIM is located approximately 2.5 miles east of the City of Chino Hills and approximately seven miles north of Prado Dam. As delineated by the Chino Basin Watermaster (Watermaster) in the *2016 State of the Basin Report*,¹ the extent of the plume with detectable PCE concentrations greater than 0.5 $\mu\text{g/l}$ is about 4,000 feet long and 3,000 feet wide, and it is located predominantly beneath the CIM property (Exhibit 1).

Site History: Since 1939, the State of California Department of General Services (State) has operated the Chino Institution for Men (CIM), a correctional facility in the City of Chino. The property is bounded by Eucalyptus Avenue to the north, Euclid Avenue to the east, Kimball Avenue to the south, and Central Avenue to the west. The primary uses of the CIM property include agricultural operations, inmate housing, and correctional facilities. The Heman G. Stark Youth Correctional Facility occupies the eastern portion of the CIM property. CIM provides potable water to both the nearby Youth Correctional Facility and Chino Institution for Women as well as the CIM facilities. CIM operates multiple supply wells, a distribution system, and a water treatment plant. The land surrounding the CIM property was historically used for agriculture and dairy activities, but it has rapidly developed in recent years to residential and commercial uses.

Regulatory Orders:

- No regulatory Orders for site remediation and monitoring. The State conducted voluntary cleanup and monitoring under direction from Santa Ana Regional Water Quality Control Board (Regional Board). On December 17, 2009, the Regional Board determined “No Further Action” was required for remediation or monitoring.

Regulatory and Monitoring History: In 1990, PCE was detected at a concentration of 26 $\mu\text{g/l}$ at CIM drinking water supply Well 1. This prompted the California Department of Health Services (CDHS), now the California State Board Division of Drinking Water (DDW), to direct CIM to stop using the well as a source of drinking water. The detection of elevated PCE concentrations in two other CIM drinking water supply wells (1A and 11A) triggered the Regional Board to request an investigation of the source and extent of the onsite PCE contamination.

Annual Status Report
California Institution for Men Plume
October 2018

The Phase I Initial Site Assessment² was performed at the CIM site in 1992 and included a review of CIM's history, operations, and chemical use. The investigation identified five potential sites where VOCs were used and could have impacted soil and groundwater. These areas included: the old laundry building, the furniture factory, the vocational shops, the state garage, and the powerhouse.

The Phase II Site Assessment³ was performed from 1992 to 1994 and included a soil vapor survey, soil sampling analysis, groundwater quality analysis, and vapor extraction testing. Seven groundwater monitoring wells were installed and sampled as part of this investigation. The results from the soil vapor investigation and the groundwater quality analysis showed low concentrations of contaminants throughout the site. The old laundry facility and nearby areas were identified as the most likely principal source of VOCs at CIM.

An interim remedial measure, which included the extraction and treatment of groundwater from Well 1, was implemented in 1997. In 2001, construction began on two CIM water supply wells and associated piping to prevent VOC-impacted groundwater at the southern end of the plume from migrating away from the site.

Between August 1994 and May 2001, a network of approximately 43 monitoring wells at varying depths in the shallow, intermediate, and deep aquifer zones below the site were constructed. The wells were sampled intermittently through 2007 to analyze the extent and concentrations of VOCs in the groundwater beneath the CIM property. The VOC impacts to groundwater were limited to the source area and immediately downgradient and had not and were not expected to migrate off the property. A final monitoring event⁴ was conducted by the State during January 2007, which included groundwater quality sampling at 39 water supply and monitoring wells at the CIM property. Based on this monitoring event and data from previous monitoring efforts, it was concluded that PCE concentrations in groundwater beneath the site had substantially diminished. All samples collected from the potable water supply wells during this sampling event did not test above the MCL for PCE or any other VOCs. However, PCE concentrations above the MCL of 5 µgl were present in three monitoring wells in the shallow aquifer zone, ranging from about 8 to 27 µgl.

In February 2007, the State submitted a request to the Regional Board for a No Further Action (NFA) finding for groundwater remediation and monitoring at CIM. On December 17, 2009, the Regional Board issued a determination of NFA for the CIM site.⁵

⁵ California Regional Water Quality Control Board, Santa Ana Region. Determination of No Further Action (NFA), Tetrachloroethylene Remediation Project, California Institution for Men, Chino. December 17, 2009.

Annual Status Report
California Institution for Men Plume
October 2018

Remedial Action: In July 1997, the State implemented remediation activities termed *The PCE Remediation Project*⁶, with an interim remedial measure where groundwater pumped from Well 1 was treated for VOCs using air stripping. Operation of the air stripper at Well 1 continued until 2004, when the permeability of the air stripper packing was compromised by the accumulation of mineral precipitates. The pump-and-treat process at Well 1 removed 57.9 pounds of PCE and TCE collectively. Groundwater production from Well 1 resumed without treatment in 2004 with approval from the CDHS and Regional Board. A supplemental remedial measure began in 2001 which included the construction of two new CIM water supply wells (Well 14 and Well 15), located in an area to intercept the toe of the VOC plume, promoting hydraulic control of the VOCs in groundwater beneath the CIM. Wells 14 and 15 operated without treatment, and from January 2003 to December 2008, these two wells removed an additional 13.8 pounds of PCE and TCE collectively.

Remediation requirements at CIM ended in December 2009 with the Regional Board's determination of NFA. CIM water supply Wells 1, 14, and 15 continue to be active production wells.

Monitoring and Reporting Program: The State conducted voluntary monitoring at CIM pursuant to the Regional Board from 1992 to 2007 at 31 monitoring wells and 14 water supply wells. Voluntary monitoring ended in December 17, 2009 with the Regional Board's approval of the 2009 determination of NFA. As part of the NFA the State was required to decommission monitoring wells located onsite in accordance with California Well Standards (DWR Bulletin No. 74-81). It was agreed amongst the consultants, counsel, the State, and the Watermaster to preserve some of the CIM monitoring wells for the Watermaster's groundwater-level monitoring program pursuant to the Optimum Basin Management Program (OBMP). Watermaster and the State agreed to preserve the following 16 wells:

B2B	MW-21S	MW-28S	MW-34S
B4B	MW-24I	MW-28I	P-23S
MW-20I	MW-24S	MW-31I	P-23I
MW-21I	MW-22DR	MW-33S	P-23D

Groundwater-quality monitoring of the CIM potable supply wells continues as part of its water supply operations under the DDW regulations. The State samples the potable supply wells monthly for PCE and TCE and reports to the DDW. Watermaster routinely collects all groundwater-quality data from the DDW's Water Quality Analyses Database⁷ for the CIM potable supply wells as part of the OBMP groundwater-quality monitoring program and uses this data to characterize the areal extent and concentration of the PCE plume every two years.

Recent Activity: There is no further regulatory activity associated with the CIM Cleanup Program Site since case closure pursuant to the December 17, 2009 determination of NFA.

California Institution for Men Plume
October 2018

The most recent characterization of the plume was completed by Watermaster in the *2016 State of the Basin Report* (Exhibit 1). Since case closure in 2009, the PCE plume has shown no significant change, based on available data. The following table summarizes the five-year maximum PCE concentration (October 2013 to June 2018) for wells within the plume based on monthly DDW sampling:

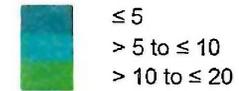

**Maximum Five-Year PCE Concentration in CIM Wells
(October 2013 – June 2018)**

Well	Maximum PCE (µg/l)
1	15
1A	3.4
11A	1
14	1.25
15	8.5
16	2.2

Status Report

Former Kaiser Steel Mill Plume and CCG Ontario Monitoring and Remediation

October 2018

Contaminants of Concern: From 1983 to 1993 the primary contaminants of concern (COC) for the former Kaiser Steel Mill site were total dissolved solids (TDS) and total organic carbon (TOC). In 2008, additional investigations commenced to identify other COCs. Currently, COCs associated with the site include: hexavalent chromium, carbon tetrachloride, and chloroform. TDS and TOC are no longer considered contaminants of concern.

Location: The former Kaiser Steel Mill site is a 1,200-acre parcel in an unincorporated area of San Bernardino County between the Cities of Fontana and Ontario. The site is bounded by Whittram Avenue to the north, Interstate 10 to the south, and Etiwanda and Cherry Avenues to the west and east, respectively. The last delineation of the Kaiser TDS/TOC plume extent was completed in 2008 by the Chino Basin Watermaster (Watermaster),¹ and at that time, the plume was approximately 7,000 feet wide and extended 18,500 feet southwest from the site. Exhibit 1 shows the location of the site and the extent of the TDS plume in 2008. No plume delineations for the other contaminants of concern have been prepared.

Site History: The Kaiser Steel Corporation operated the Kaiser Steel Mill from 1943 to 1983, and during peak production, the facility was the largest steel producer in the western United States. For the first 30 years, solid and liquid wastes produced from the manufacturing processes were disposed of in waste pits and unlined surface impoundments throughout the site, which allowed for evaporation and percolation. In the early 1970's, the surface impoundments were lined to eliminate percolation to groundwater. In 1987, the Kaiser Steel Corporation filed for bankruptcy and re-organized into Kaiser Resources Inc., which later became Kaiser Ventures Inc.

After the Kaiser Steel Corporation ceased steel operations in 1983, portions of the property were divided and leased or sold to the following corporations:

- Chemwest Industrial Inc., a chemical manufacturing company, leased land in the southwest portion of the property (East Slag Pile Area in Exhibit 1), but no longer operates on-site.
- California Steel Industries (CSI) – Purchased 458 acres to continue operations as a steel rolling mill.
- The Auto Club Speedway (formerly California Speedway) was constructed by the Penske Corporation on 500 acres in the northern corner of the site in 1995.
- CCG Ontario, LLC (CCG),² purchased 592 acres along the western and southern portions of the property in 2000 and inherited responsibility for remediation and monitoring of site contamination from Kaiser Ventures Inc.

Regulatory Orders:

- Regional Water Quality Control Board Santa Ana Region (Regional Board) Cleanup and

Former Kaiser Steel Mill Plume and CCG Ontario Monitoring and Remediation

October 2018

Abatement Order (CAO) No. 87-121 – Required Kaiser Steel Corporation to initiate a Phase IV groundwater investigation and implement a remediation action alternative for groundwater contamination.

- Regional Board CAO No. 91-40 – Required a feasibility study for a salt-offset remediation alternative for groundwater contamination.
- California Department of Health Services (now Department of Toxic Substance Control [DTSC]) Consent Order with Kaiser Resources Inc. (August 1988) – Required Kaiser Resources Inc. to investigate any release of contamination to air, soil, surface water, and groundwater and ensure appropriate remedial measures were taken.
- DTSC Imminent and Substantial Endangerment Determination Consent Order with CCG (August 2000) – Transferred responsibility of investigation and remedial activities associated with the 592 acres purchased by CCG and the Coal Tar Pits Parcel to CCG.

Regulatory and Investigation History: In July 1983, a phased investigation of potential groundwater contamination, resulting from the disposal of high-salinity wastewater to unlined ponds during the early years of operation, was performed at the former Kaiser Steel Mill site. The Phase I and II studies³ were completed in December 1983 and identified 28 waste sites and four likely point-sources that contributed to TDS and TOC contamination of groundwater beneath the facility. Groundwater samples were collected at existing on-site and off-site wells to determine the preliminary extent of groundwater contamination and to assess groundwater quality downgradient from the site. The Phase III investigation⁴, completed in March 1986, resulted in the construction of monitoring wells at six additional locations (five single-point and a quadruple-nested. Based on the data three separate TDS plumes were identified: one on-site extending to a depth of 770 feet below ground surface (ft-bgs), and two that migrated off-site. Additionally, one TOC plume was identified on-site extending to a depth of approximately 100 (ft-bgs). The Phase III investigation determined that the TDS plumes were moving downgradient at a rate of 100 to 300 feet per year with the potential to impact downgradient municipal production wells.

In 1987, the Regional Board issued CAO No. 87-121⁵ to the Kaiser Steel Corporation in response to the findings of the phased investigations, which required a Phase IV groundwater investigation to further characterize the plume extents and evaluate remediation strategies, such as groundwater extraction and treatment.

On August 22, 1988 a Consent Order⁶ was signed between Kaiser Resources Inc. and the California Department of Health Services, Toxic Substances Division (later known as the DTSC) to assess the

Status Report

Former Kaiser Steel Mill Plume and CCG Ontario Monitoring and Remediation

October 2018

extent of soil and groundwater contamination at the site and prescribe any necessary remedial actions. Two preliminary assessment and site inspection reports were published (August 1988 and January 1989⁷) to identify areas of contamination that required further investigation. A Remedial Investigation and Feasibility Study of the identified areas was completed in 1990. The investigation concluded the following:

- three areas of the former Kaiser Steel Mill site required remediation and further investigation—the tar pits, the by-products plant area, and the east slag pile, and
- two areas required removal of contaminated materials—the cooling tower sludge pit and the furnace dust and mill scale piles. Remediation of the by-products plant area and cooling tower sludge pit began in 1995 prior to the construction of the Auto Club Speedway.

In 1990, Kaiser Resources Inc. initiated plans for a ‘salt-offset’ as an alternative to groundwater extraction and treatment of the TDS and TOC plumes. In March 1991, the Regional Board rescinded CAO No. 87-121 and issued CAO No. 91-40, which allowed Kaiser Resources Inc. to complete a feasibility study for a salt-offset program. The Draft Phase IV Groundwater Remediation and Feasibility Study⁸ was published in 1991 which analyzed a salt-offset alternative and nine other groundwater remediation alternatives. In 1993, CAO No. 91-40 was rescinded when Kaiser Resources Inc. and the Regional Board entered into a settlement agreement (known as the Salt Offset Agreement). Under the Agreement, Kaiser Resources Inc. would contribute financial resources and dedicate its Chino Basin water rights to support the construction and operation of the Chino Basin Desalters in exchange for release from any future liability for TDS and TOC contamination. Kaiser Resources Inc. made a one-time contribution of \$1.5 million and 25,000 acre-feet of its water rights established under the Chino Basin Judgement.

Between 1986 and 1994, an interim groundwater-quality monitoring program was implemented to further characterize the extent of the TDS and TOC groundwater contamination. The monitoring program consisted of sampling a network of 30 on-site and off-site monitoring and production wells, including newly constructed monitoring wells (KOSF-1 and MP-2). The maximum TDS and TOC concentrations detected in groundwater samples during this time were 1,600 milligrams per liter (mg/l) and 70 mg/l, respectively.

In 2000, CCG purchased 592 acres of the former Kaiser Steel Mill site and entered into a Consent Order⁹ with the DTSC that transferred responsibility for remediation of site related contamination from Kaiser Ventures Inc. (formerly Kaiser Resources) to CCG. The 2000 Consent Order also

Status Report

Former Kaiser Steel Mill Plume and CCG Ontario Monitoring and Remediation

October 2018

required CCG to perform groundwater investigations and, if necessary, develop remediation alternatives for additional contaminants of concern, other than TDS and TOC.

Remedial Action: As previously noted, remediation activities associated with the TDS and TOC plumes ended with the adoption of the 1993 Salt Offset Agreement. The 2000 Consent Order between the DTSC and CCG divided the site into four ‘Operable Units’ (OU’s) (see Exhibit 1 for OU boundaries) and required continued remediation of each OU. The following describes the Remedial Action Plans (RAP) implemented for each OU:

- **OU-1 - Tar Pits.** DTSC approved the final amended RAP in 2000 which prescribed the construction of a cap over the tar pits parcel.
- **OU-2 – Auto Club Speedway/By-Products Area.** DTSC approved the final RAP on May 2, 1995, which prescribed material removal and the construction of a 12.84-acre cap over the contaminated soil. Prior to the construction of the cap 9,212 tons of sludge waste were excavated and treated via chemical fixation and 21,200 tons were removed completely from the site¹⁰.
- **OU-3 – East Slag Pile Landfill Area.** DTSC approved the final RAP on October 31, 2007, which documented the construction of a four-foot thick monolithic soil cover, landfill gas collection and control system/monitoring probes, surface water drainage system, groundwater monitoring, and long-term operation and maintenance.
- **OU-4 – Chemwest Upper Ponds/Consolidated Waste Cell/Aboveground Storage Tanks/Chrome Ponds and Adjacent Areas (CCAC).** DTSC approved the final RAP on February 13, 2009, which prescribed the construction of a cap over the CCAC¹¹, groundwater monitoring, and long-term operation and maintenance.

The above remedial activities specified for OU-1 through OU-4 have been implemented. Long-term monitoring and inspection reports for each OU are published on an annual or semi-annual basis to ensure the completed remedies are operating properly.

In 2008, an additional operable unit (OU-5) (not a geographical area) was established to conceptually describe site-wide groundwater monitoring in accordance with a *Groundwater Remedial Investigation Work Plan*¹² (2008 Work Plan) published the same year. The 2008 Work Plan aimed to address data gaps in assessing groundwater contamination other than TDS and TOC, and to develop a long-term groundwater-quality monitoring program. The resulting Site-Wide Groundwater Monitoring Program was approved by DTSC on November 3, 2008 and commenced with the installation of 32 groundwater monitoring wells at 24 locations over a five-month period in 2009. Eight quarterly groundwater sampling events were performed from 2009 to 2011. Data collected from the sampling

October 2018

effort were used to perform a health risk assessment of off-site groundwater by comparing measured constituent concentrations with EPA regional screening levels (RSL's). Hexavalent chromium, carbon tetrachloride, and chloroform were detected at concentrations above the risk-based screening concentrations and were therefore determined to be site-wide constituents of concern that warranted continued monitoring.

On September 1, 2016, CCG completed the *Final Groundwater Remedial Investigation Report/Feasibility Study and Remedial Action Plan*¹³ (Final RI/FS/RAP) which included the results of the Site-Wide Groundwater Monitoring Program. The selected RAP for OU-5 was continued groundwater monitoring and was approved by the DTSC on September 13, 2016. The site-wide groundwater monitoring will include annual sampling of 20 monitoring wells (11 well sites), and annual reporting to the DTSC.

Monitoring and Reporting: Current groundwater monitoring efforts are performed pursuant to the Operations and Maintenance plans for OU-2, OU-3, and OU-4. Initial groundwater monitoring for OU-5 ceased in 2011 following completion of the eight consecutive sampling events prescribed in the 2008 Work Plan. Continued groundwater monitoring and reporting on an annual basis for OU-5 was proposed in the *Sitewide Water Quality Sampling and Analysis Plan* included as Appendix M of the Final RI/FS/RAP but does not appear to have been implemented to date.

Exhibit 1 shows the location of the 24 well sites currently and historically monitored for OU's 1 through 5. The table below summarizes the number of wells, sampling frequency, and duration of sampling for each monitored OU.

Operable Unit	# of Wells	Sampling Frequency (Duration)
OU-2	5	Quarterly (1995-2015); Semi-Annual (2015-present)
OU-3	9	Quarterly (2011-2015); Semi-Annual (2015-present)
OU-4	11	Quarterly (2011-present)
OU-5 (work plan)	34	Quarterly (2009-2011)
OU-5 (final RAP)	20	Annually (pending)

Groundwater monitoring reports for OU-2, OU-3, and OU-4 are published on a quarterly or semi-annual basis. Site-Wide Five-Year Reports are prepared and submitted to the DTSC to determine if the implemented remedial actions remain protective of human health and the environment.

Status Report

Former Kaiser Steel Mill Plume and CCG Ontario Monitoring and Remediation

October 2018

Currently, Watermaster samples eleven monitoring wells annually at four down-gradient locations (Exhibit 1) for the Key Well Groundwater Quality Monitoring Program (KWGWQMP) and provides monitoring results to CCG upon request.

Recent Activity: The most recent groundwater monitoring reports published for OU-2, OU-3, and OU-4 are summarized below:

- **OU-2** – The *Second Semi-Annual 2017 Groundwater Monitoring Report for OU-2*¹⁴ was completed February 15, 2018 and describes results from sampling that occurred on August 16 and 21, 2017. Nitrate (up to 44 mg/l) and sulfate (up to 550 mg/l) were detected at concentrations above their respective Maximum Contaminant Levels (MCLs) of 10 mg/l and 250 mg/l. Hexavalent chromium (up to 6.0 micrograms per liter [µg/l]), lead (up to 4.9 µg/l), and arsenic (up to 1.5 µg/l) were detected at concentrations above their respective Public Health Goals (PHG) of 0.02 µg/l, 0.2 µg/l, and 0.004 µg/l.
- **OU-3** – The revised *Second Semi-Annual 2017 Groundwater Monitoring Report for OU-3*¹⁵ was completed June 18, 2018 and describes results from sampling that occurred from August 16 through 23, 2017. Hexavalent chromium was detected at concentrations up to 8.0 µg/l but did not exceed the MCL.
- **OU-4** – The revised *Fourth Quarter 2017 Groundwater Monitoring Report for OU-4*¹⁶ was completed June 15, 2018 and describes results from sampling that occurred from November 15 through 21, 2017. Nitrate (up to 17 mg/l), sulfate (up to 310 mg/l), carbon tetrachloride (up to 1.4 µg/l), total chromium (up to 73 µg/l), and hexavalent chromium (up to 76 µg/l) were detected at concentrations above their respective MCL's of 10 mg/l, 250 mg/l, 0.5 µg/l, 50 µg/l, and 10 µg/l¹⁷.

A *Site-Wide Five-Year Review Report*¹⁸ was submitted to the DTSC on April 1, 2016. The report concluded that the remedial actions for all OUs are functioning as intended. The next Site-Wide Five-Year Report is scheduled to be published in 2021.

Watermaster performed their most recent annual sampling event at the eleven Kaiser and MZ3 monitoring wells for the KWGWQMP during September 2018 (analytical results are pending). Over the last five years (2012-2017) data from these wells have shown MCL exceedances for the following constituents: nitrate as nitrogen, sulfate, arsenic, and hexavalent chromium¹⁷, with maximum

¹⁷ As of September 11, 2017 the MCL for hexavalent chromium that was established in 2014 is no longer in effect; the Superior Court of Sacramento County issued a judgement invalidating the MCL and ordering State Water Resources Control Board (State Board) to overturn the MCL. As of September 11, 2017 there is no MCL for hexavalent chromium but the State Board does plan on establishing a new MCL in the near future.

Exhibit 1

Annual Status Report
Milliken Landfill Plume
October 2018

Contaminant: The primary contaminant is trichloroethene (TCE). The maximum contaminant level (MCL) for TCE is 5 micrograms per liter ($\mu\text{g/l}$). The maximum TCE concentration detected in groundwater samples collected from wells within the plume area during the last five years (July 2013 to June 2018) is 16 $\mu\text{g/l}$ (measured at well M-08B in October 2013). The highest concentration of TCE ever measured on site is 178 $\mu\text{g/l}$ (measured at well M-2B in April 1997). Other contaminants of concern include the following volatile organic compounds (VOCs): tetrachloroethene (PCE), dichlorodifluoromethane, trichlorofluoromethane, 1,1-dichloroethane, and cis-1,2-dichloroethene.

Location: The Milliken Sanitary Landfill (MSL) is located in the City of Ontario along the northwest intersection of Milliken Avenue and Mission Boulevard. The MSL occupies an area of approximately 196 acres about one mile west of Interstate 15 and 1.2 miles southeast of Ontario International Airport. The MSL is owned and managed by the County of San Bernardino Solid Waste Management Division (County). The MSL TCE plume extends downgradient in a southwestern direction from the MSL site. As delineated by the Chino Basin Watermaster (Watermaster) in the *2016 State of the Basin Report*,¹ the extent of the plume with detectable TCE concentrations greater than 0.5 $\mu\text{g/l}$ is about 2,500 feet at its widest point and 1,500 feet long. Exhibit 1 compares the location and extent of the TCE plume delineated by Watermaster (WEI, 2017) and by the County in its most recent (2015) delineation of the plume for total VOCs.²

Site History: The MSL was operated as a Class III Municipal Solid Waste Management Unit accepting non-hazardous waste from 1958 to March 1999. Since its closure, the County maintains the MSL drainage and erosion control systems to ensure, to the greatest extent possible, that ponding, infiltration, inundation, erosion, slope failure, and washout are prevented during peak storm flows. The drainage control facilities consist of a network of earthen berms, benches, asphalt down drains and V-channels, concrete channels, reinforced concrete pipes, and sedimentation basins.

As of 2017, the County leases a portion of the MSL property to PVN Milliken, LLC for a photovoltaic solar facility. The three-megawatt power generating solar facility consist of about 14.5 acres of solar panels located on the top and intermediate decks of the closed landfill. The footprint of the facility is shown on Exhibit 1.

Regional Water Quality Control Board, Santa Ana Region (Regional Board) Regulatory Orders:

- Waste Discharge Requirements (WDR) and Monitoring and Reporting Program (M&RP) Order No. 81-3 and subsequent WDRs and M&RPs Order Nos. 93-57, 94-17, 96-40, 98-89, and R8-2015-0040 (current). Requirements for the design, construction, and maintenance of run-on runoff drainage control systems at the landfill and the supportive monitoring and

reporting requirements. Orders Nos. 93-57, 94-17, 96-4, and 98-99 are combined WRDs and M&RPs for all landfills in the Santa Ana Region.

- Cleanup and Abatement (CAO) Order No. 91-92. Required the MSL to correct drainage and erosion control deficiencies that existed on the landfill property.
- Cease and Desist Order No. 96-41. Required the MSL to submit a workplan with a schedule for the design and construction of a permanent and effective drainage and erosion control system and implementation of said workplan.
- WDRs R8-2002-0033, R8-2002-0085, R8-2013-0020 (current). General WDRs for the re-injection/percolation of extracted and treated groundwater within the Santa Ana Region.

Regulatory and Monitoring History: On February 26, 1981, the Regional Board adopted WDR No. 81-3 for the discharge of municipal solid wastes to land at the MSL. The WDR addressed the placement, monitoring, and reporting of waste at the landfill; however, it did not require groundwater monitoring. In 1987, groundwater monitoring began with the installation of five monitoring wells as part of the Solid Waste Assessment Test (SWAT) investigation³ at the MSL. Results from the initial monitoring indicated that there were multiple contaminants at concentrations significantly above background levels in the groundwater underlying and adjacent to the facility. The contaminants included multiple VOCs: dichlorodifluoromethane, 1,1-dichloroethene, PCE, and TCE. In 1989, the Regional Board requested that the County investigate the nature and extent of the VOC contamination. As a result, the County completed the Phase I Evaluation Monitoring Program (EMP)^{4,5} in 1994, which included the installation of ten additional monitoring wells; eight wells were installed downgradient from the facility, and two wells were installed upgradient. Elevated concentrations of TCE and PCE were detected in the new monitoring wells.

On June 24, 1991, the Regional Board issued CAO No. 91-92 to the County and other landfill operators in the region. The order required the correction of the drainage and erosion control deficiencies on the landfill property that could potentially cause the discharge of pollutants to groundwater. In 1994, the CAO was rescinded when the landfills achieved compliance, and concurrently, Order No. 94-17 was adopted to amend the WRDs for all landfills in the Santa Ana Region and combine them under one WRD and M&RP. In 1996, the Regional Board issued Cease and Desist Order No. 96-41⁶ for the MSL for failure to maintain the drainage and erosion control systems. In October 1999, the Regional Board approved the *Final Closure and Post Closure Maintenance Plan*⁷ for the MSL. The MSL began its multiphase closure process while still accepting waste. Phase one, termed the “East Mound Closure,” was completed in March 1997, and was a pilot project to aid

October 2018

in the design of a soil cover for the rest of the landfill to prevent further contamination. Phase two, termed the “North and East Slope Closure,” was completed in 1997 and included the construction of a six-foot thick monolithic cover over 45 acres of the landfill. The final phase of the landfill closure was completed in March of 2005 when the remaining 72 acres of the landfill were covered with a four-foot monolithic cover.

In response to the findings from the Phase I Evaluation Monitoring Program, 14 additional monitoring wells were constructed from 1994 to 1997 to further investigate the extent of contamination from the MSL. Under the direction of the Regional Board, the County completed a Phase II Evaluation Monitoring Program⁸ and an Engineering Feasibility Study⁹ in 1998. Groundwater flow modeling¹⁰ was also performed to support the selection of an appropriate remediation strategy. The Regional Board approved a remediation alternative that included (1) a pump and treat system for onsite contaminated groundwater and (2) monitored natural attenuation for offsite contaminated groundwater. Construction of the pump and treat system was completed on March 4, 1999 and consisted of 13 groundwater extraction wells located at the downgradient edge of the MSL site. Offsite monitoring for natural attenuation began at four offsite wells in 1998.

Beginning in 2000, groundwater-levels declined monotonically in the vicinity of the MSL, and by 2007, the groundwater-level dropped below the total depths of all 13 of the onsite extraction wells and five of the offsite monitoring wells. In response, the Regional Board requested that the County complete an updated feasibility study to update the evaluation of the effectiveness of the remediation strategy and the extent of the contaminant plume. In March 2013, the County finalized the *Updated Engineering Feasibility Study*¹¹ for the MSL (2013 Feasibility Study). The 2013 Feasibility Study evaluated several potential alternative treatments to mitigate the plume. The County concluded that monitored natural attenuation was the appropriate remediation alternative. This revised remediation alternative was approved by the Regional Board on May 15, 2013.

In 2015, the County submitted a work plan¹² to investigate the offsite impacts to groundwater near the landfill, which addressed the following requests from the Regional Board: collect gas samples to evaluate human health risks for commercial developments south of the landfill, update the 1998 groundwater flow model to incorporate current data and the fact that the groundwater pump-and-treat system is not in use, evaluate the need for additional corrective actions, and install additional downgradient monitoring wells. The County proposed (1) to model the plume using the computer

October 2018

software BIOCHLOR¹³ and (2) to increase the frequency of soil-gas monitoring from quarterly to four times per quarter to evaluate the feasibility of expanding the landfill gas collection system and converting the dry groundwater extraction wells to soil-vapor-extraction wells.

The County and PVN Milliken, LLC. submitted a revised *Final Postclosure Maintenance Plan*¹⁴ in November 2016 and a land use plan¹⁵ in December 2016 to modify the MSL's end use plan to include the solar plant on the landfill surface. The Regional Board approved the plans in January 2017.¹⁶ The revised post-closure maintenance plan provides a basis for plan inspection, maintenance, and monitoring of the MSL during the post closure maintenance period. The revised land use plan describes PVN Milliken's modification to the landfill, and its responsibility to maintain and monitor the land in a way that does not impact water quality.

Remedial Action Plan: As previously noted, the original remedial action plan that consisted of pump and treat and monitored natural attenuation had to be revised due to declining water levels. All 13 onsite extraction wells and five of the eight offsite monitoring wells dried up as groundwater elevations declined below well depths. This also caused the pump and treat system to halt operations beginning in 2007. The 2013 Feasibility Study identified monitored natural attenuation as the preferred remedial alternative and included certain 'trigger points' that would require additional mitigation measures to be initiated. Action is triggered:

- 1) when the total VOC concentration¹⁷ in samples from downgradient monitoring well M-8B exceeds the 1998 model-predicted VOC concentrations for two consecutive quarters, or
- 2) when a "statistically significant" increasing VOC concentration trend is identified over a one-year period after the landfill gas improvements have been implemented.

The trigger points were approved by the Regional Board in 2013.¹⁸ If additional remedial action is deemed necessary based on these trigger points, the most appropriate and cost-effective remediation measure will be evaluated at the time.

The 2013 Feasibility Study specified that if VOC concentrations increase to one-half of the 1998 model-predicted VOC concentrations in wells at the center of the plume, an additional off-site

Annual Status Report
Milliken Landfill Plume
October 2018

monitoring well would be necessary near well M-19 to monitor the attenuation of the plume in the lower aquifer as it moves away from the site.

Monitoring and Reporting: The County conducts groundwater, surface water, and soil monitoring at the MSL pursuant to a Corrective Action Program to address impacts to groundwater. The monitoring program consists of 26 groundwater monitoring wells, two piezometers, five soil-pore gas monitoring probes, three surface water monitoring stations, and one landfill gas condensate station. All monitoring wells that are not dry are sampled quarterly for groundwater quality and measured for groundwater levels. Surface-water quality sampling at three stations is conducted semi-annually in the first and third quarters. Soil-gas screening is performed quarterly, and landfill gas condensate sampling is conducted annually in the fourth quarter.

The groundwater data collected during the quarterly sampling events is statistically analyzed to identify increasing or decreasing trends of VOCs and other constituents of concern.

The quarterly groundwater monitoring data are also used to assess natural attenuation of the off-site extent of the plume. Monitoring well M-8B was used to calibrate the model and to determine the trigger point concentrations that would necessitate further corrective actions. Exhibit 1 shows the location of well M-8B. The model-predicted VOC concentrations over time are shown in the following table:

Trigger Points for Additional Corrective Action Measures (µg/L)					
Year	Total VOC Load at M-8B*	Year	Total VOC Load at M-8B*	Year	Total VOC Load at M-8B*

*Total VOC load equals the sum of all detected VOC concentrations in a given sample [µg/L].

Annual Status Report
Milliken Landfill Plume
October 2018

Recent Activity:

The County's most recent monitoring event occurred in April 2018. The results of the monitoring event were reported in the second quarter of 2018 monitoring report submitted to the Regional Board in July 2018.¹⁹ During the 2018 second quarter sampling event groundwater-levels were measured at nine wells, and groundwater-quality samples were collected at eight wells. Fifteen monitoring wells, one piezometer, and all three surface water monitoring stations were dry. There was no methane detected in the soil-pore gas samples. The following summarizes the main results from the monitoring event:

- The TCE concentrations in all active monitoring wells have remained below the MCL as of April 2018 with the exception of M-8B, which exceeded the MCL with a concentration of 9.9 µgl on April 10, 2018.
- The total VOC concentration at well M-8B was 22 µgl, which is below the trigger threshold of 130 µgl. Thus, no additional correction action has been triggered.
- There were no significant changes in groundwater chemistry beneath the MSL, compared to the previous monitoring event, but there were three higher than historical maximum concentrations: nitrate as nitrogen at M-7B (24 milligrams per liter [mg/l]), nitrate as nitrogen at M-15B (5 mg/l respectively), and chloroform at well M-12B (0.51 µgl).
- No additional corrective actions have been triggered and monitoring for natural attenuation will continue under the existing approved protocols.

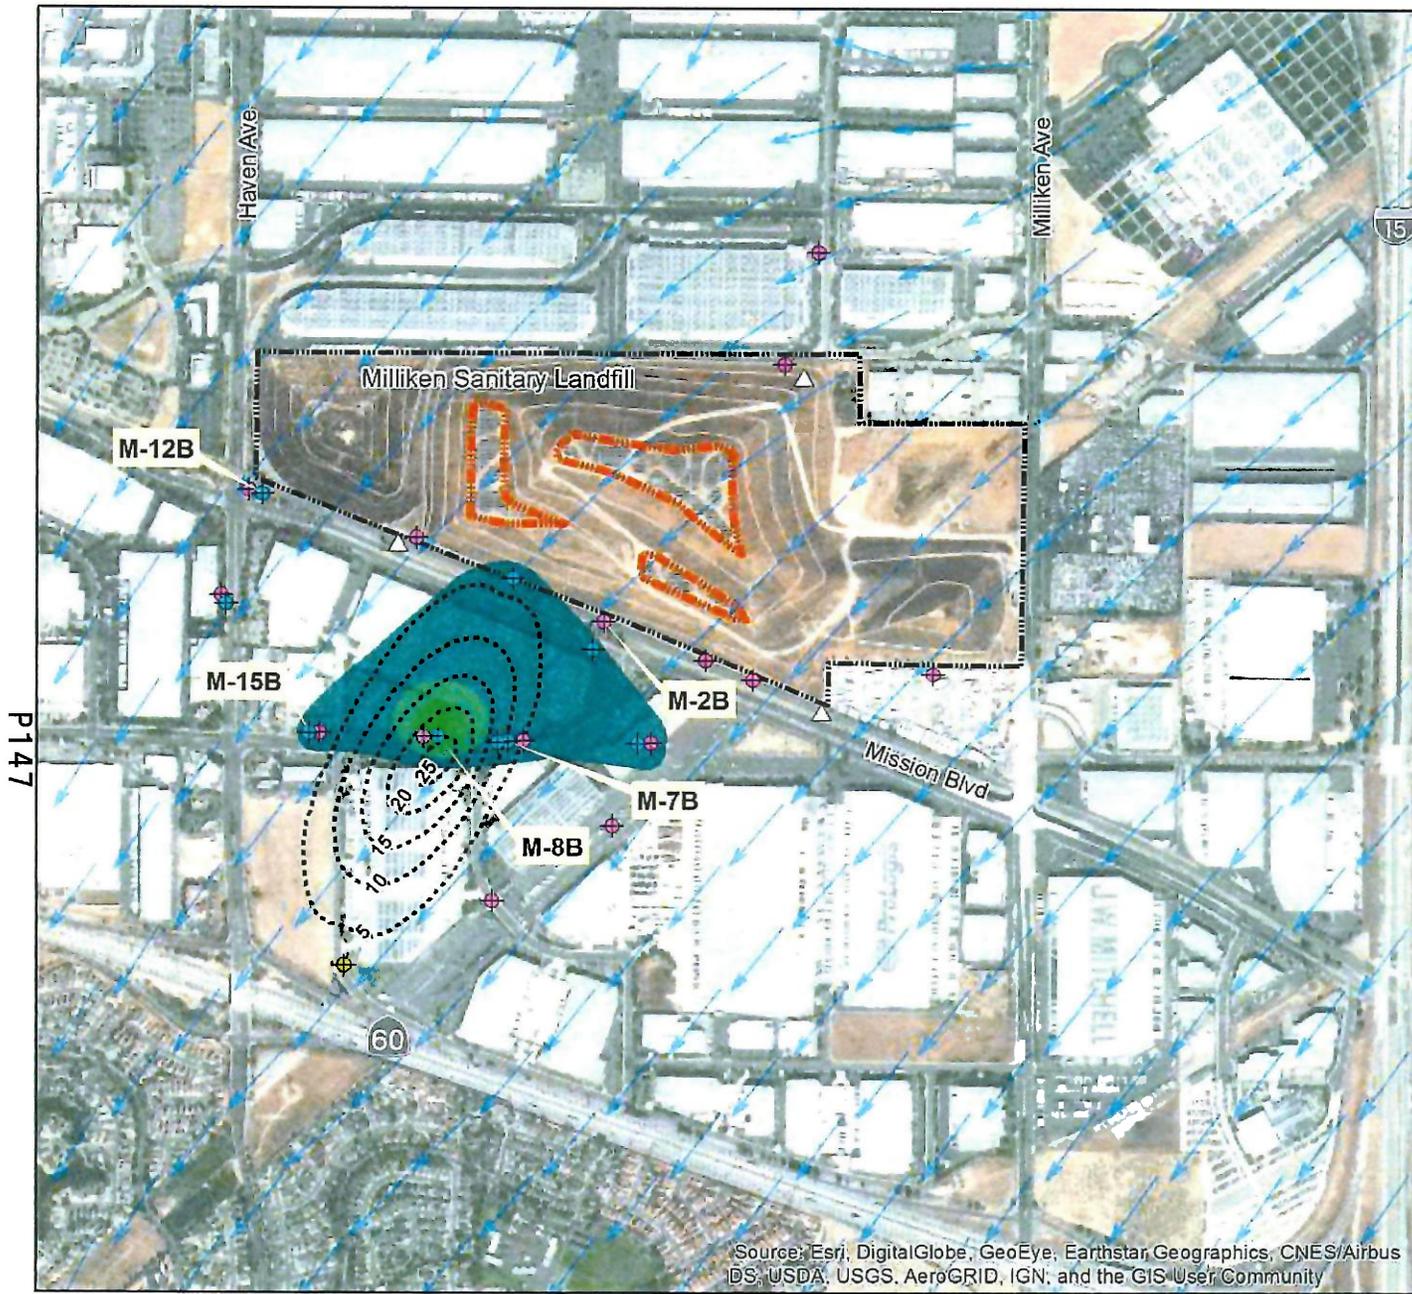

On March 9, 2018, the County submitted the *Evaluation of Off-Site Impacts to the Groundwater at the MSL*²⁰ to the Regional Board pursuant to the 2015 workplan. The report included an update of the 1998 groundwater-flow model to incorporate the non-operating groundwater pump-and-treat system and current monitoring data, and a summary of the soil-pore gas sampling at the dry extraction wells for the pump-and-treat system. Based on the results of the modeling and monitoring, the County proposes: 1) the installation of a new downgradient monitoring well (see Exhibit 1), and 2) a focused soil-gas investigation to determine whether soil gas mitigation is necessary. The Regional Board accepted the proposed actions on March 29, 2018.²¹

Annual Status Report

Stringfellow Contaminant Plume

October 2018

Contaminants: The primary contaminants at the Stringfellow site are perchlorate, trichloroethene (TCE), and chloroform. The maximum contaminant level (MCL) for perchlorate and TCE are 6 micrograms per liter (μgl), and 5 μgl , respectively. Chloroform does not have a MCL but is assessed to a cleanup level¹ of 6 μgl for the Stringfellow site. The maximum concentrations detected in groundwater samples collected from site wells over the five-year period from July 2013 to June 2018 for perchlorate, TCE, and chloroform and are shown in the table below. The data are reported in two general groups: 1) an aggregate of wells in Zones 1-3 (i.e. zones within Pyrite Canyon) and 2) wells within Zone 4 (i.e. downgradient of Pyrite Canyon).

Contaminant	MCL or Cleanup Level (μgl)	Maximum Concentration 2013-2018 (μgl)
Zones 1-3		
Perchlorate	6	14,000
TCE	5	330,000
chloroform	6	11,000
Zone 4		
Perchlorate	6	1,600
TCE	5	22
chloroform	6	21

Other contaminants at the site include, other volatile organic compounds (VOCs), semi-volatile organic compounds (SOCs), pesticides, para-chlorobenzenesulfonic acid, n-nitrosodimethylamine, and selected heavy metals. Additionally, the groundwater under the former evaporation ponds has a pH of <4.

Location: The former Stringfellow Landfill site is located within the eastern portion of the Chino Basin in Pyrite Canyon about one mile north of the community of Glen Avon in the Jurupa Valley. Pyrite Canyon overlies Holocene and Pleistocene unconsolidated alluvium and alluvial fan deposits, and bound by the granodiorite and metasedimentary units of the Jurupa Mountains.² The site is geographically divided into four groundwater zones in consideration of various operational and remediation activities. These zones include:

- **Zone 1.** On-site/Upper Mid-Canyon Area. Includes the original 17-acre disposal facility in the northern most part of Pyrite Canyon upgradient of a clay barrier (Zone 1A) and an area extending 600 feet south of the clay barrier (Zone 1B). The clay barrier was constructed in 1980 downgradient of the evaporation ponds to mitigate migration of subsurface liquids.

¹ Cleanup levels were established for TCE (5 μgl and equal to the MCL) and chloroform (6 μgl) in the Interim Records of Decision 4 by the United State Environmental Protection Agency

Annual Status Report

Stringfellow Contaminant Plume

October 2018

- *Zone 2.* Mid-Canyon Area. Includes the middle portion of the Pyrite Canyon. Contains a line of extraction wells and the Pretreatment Plant
- *Zone 3.* Lower Canyon Area. Extends southward from just south of the mid-canyon extraction wells to just north of Highway 60. Includes the Lower Canyon Treatment Facility
- *Zone 4.* A Residential community and light industrial area in the City of Jurupa Valley, extending from Highway 60 to immediately north of the Santa Ana River (approximately 22,000 to 24,500 feet southwest of the former disposal facility in Zone 1A). Includes the Community Well Head Treatment System

The general extent of plumes originating from the Stringfellow site with detectable concentrations of perchlorate, TCE, and chloroform greater than their MCLs or cleanup levels are shown in Exhibit 1. These delineations are based on the 2016 *Annual Groundwater Monitoring and Remedy Effectiveness Evaluation Report*³. The TCE and chloroform plumes are significantly less extensive than the perchlorate plume and have the following approximate extents:

- The perchlorate plume $\geq 6 \mu\text{g/l}$ extends from Zone 1 approximately 24,000 feet to the south/southwest to Zone 4. The perchlorate plume varies in width between approximately 250 and 3,200 feet. Two smaller perchlorate plumes are also shown on Exhibit 1. The first is approximately 1,400 feet long and 200 feet wide and is located near the midpoint and slightly east of the main plume. The second is located slightly west of the distal end of the main plume and is approximately 3,900 feet long and 1,000 feet wide.
- The TCE plume $\geq 5 \mu\text{g/l}$ is approximately 3,100 feet long and 300 feet wide and extends from Zone 1 to the midpoint of Zone 3 near the Lower Canyon Treatment Facility. A smaller (approximately 1,000 feet by 250 feet) disconnected TCE plume is approximately 3,400 feet further downgradient in Zone 4.
- The chloroform plume $\geq 6 \mu\text{g/l}$ is approximately 2,000 feet long and 300 feet wide and is primarily restricted to Zones 1 and 2.

Site History: Stringfellow Quarry Company Inc. operated the site as a ‘Class I’ hazardous waste disposal facility from 1956 to 1972 pursuant to the issuance of a land use variance by the Riverside County Planning Commission in 1952. During this time, approximately 34 million gallons of industrial liquid waste—derived primarily from electroplating, metal finishing, pesticide production, and aerospace propulsion industries—were deposited in unlined evaporation ponds, occupying 17 acres

³ Kleinfelder. (2017). *2016 Annual Groundwater Monitoring and Remedy Effectiveness Evaluation Report Stringfellow Superfund Site. Prepared for California Environmental Protection Agency.* November 2017.

Annual Status Report

Stringfellow Contaminant Plume

October 2018

of the site⁴ (located within *Zone 1a* on Exhibit 1). In addition to evaporation ponds, liquid wastes were sprayed into the air to expedite evaporative processes.

In 1975, following cessation of operations at the Stringfellow site, the California Regional Water Quality Control Board, Santa Ana Region initiated response actions and site investigation studies. Since that time, over 45 phases of investigation, feasibility testing, and remedial actions have been performed by various entities at the site. A record of these activities and associated reports can be found on the Department of Toxic Substances Control (DTSC) Envirostor website (<https://www.envirostor.dtsc.ca.gov/public/>).

Key Regulatory Decisions and Orders: In October 1981, the Stringfellow site was placed on the United States Environmental Protection Agency (USEPA) Interim Priorities List of Hazardous Waste Sites. An Initial Record of Decision (ROD 1) was published by USEPA on July 22, 1983. On September 8, 1983, the Stringfellow site was placed on the USEPA's final National Priorities List (NPL) as a Superfund site. Three additional RODs were published in 1984, 1987, and 1990. The following is a summary of the four RODs and major remedial actions or objectives set forth therein.

ROD 1 (USEPA 1983).⁵ The remedial activities assigned to the DTSC for oversight included: fencing of the site, erosion control, hauling and disposal of hazardous material, continued offsite groundwater mitigation, and completion of a Remedial Investigation/Feasibility Study (RIFS). In conjunction with the DTSC-led activities, the EPA assumed oversight of the following Superfund management activities: i) preliminary groundwater sampling, ii) installation of new monitoring wells, and iii) the creation of a Fast Track RIFS.

ROD 2 (USEPA 1984).⁶ The remedial action implemented as part of ROD 2 included the construction of a groundwater pre-treatment plant. Construction of the Pre-Treatment Plant in the mid-canyon area (located within *Zone 2* on Exhibit 1) began in January 1985 and was completed in November 1985. The remedial action also required the evaluation of treatment technologies that are associated with the removal of heavy metals and organics in groundwater.

ROD 3 (USEPA 1987).⁷ Two additional remedial actions were implemented as part of ROD 3. The first remedial action consisted of the construction of an up-gradient surface-water diversion north of the original contamination site (within *Zone 1A* on Exhibit 1). The second consisted of the construction of groundwater extraction wells to serve as a barrier to groundwater-flow and an

Annual Status Report
Stringfellow Contaminant Plume
October 2018

accompanying treatment facility in the southern portion of the canyon, the Lower Canyon Treatment Facility (located within *Zone 3* on Exhibit 1).

ROD 4 (USEPA 1990).⁸ The fourth ROD delineated the site into four geographic zones: *Zone 1* is the upper-canyon area, including the original 17-acre disposal area; *Zone 2* is the mid-canyon area; *Zone 3* is the lower-canyon area; and *Zone 4* is the community of Glen Avon (general area below the 60 freeway). The remedial action consisted of the installation of a groundwater extraction and treatment system, the Community Wellhead Treatment Facility in *Zone 4*, and the dewatering of *Zone 1* using extraction wells.

A final ROD outlining final remedial action objectives for *Zones 1, 2, 3* and *4* is expected to be published in 2021.

Remedial Action: The primary remedial action implemented for the RODs is groundwater extraction and treatment system, consisting of a network of over 70 extraction wells throughout *Zones 1-4* and four treatment plants. The treatment plants include the Pre-Treatment Plant, the Lower Canyon Treatment Facility, and the Lower Canyon Treatment Facility, and the Pyrite Canyon Treatment Facility. Exhibit 1 shows the location of the four treatment plants for the groundwater extraction and treatment system

Pre-Treatment Plant/ Pyrite Canyon Treatment. The Pre-Treatment Plant treats contaminated groundwater recovered from extraction wells located in *Zone 1* and *Zone 2*. Groundwater is treated for low pH, pesticides, metals, and VOCs. The plant treats and average of about 45,000 gallons per day (gpd) or 50 acre-feet per year (afy). Treated water is stored and then released to the Inland Empire Brine Line and the Orange County Sanitation Districts wastewater collection, treatment, and disposal facilities. Some of the treated effluent is used for utility water at the plant. In 2017 the Pre-Treatment Plant was replaced by the newly constructed Pyrite Canyon Treatment Facility located just north of the Pre-Treatment Plant in *Zone 1B*. The new Pyrite Canyon Treatment was designed to replace the aging infrastructure of the existing Pre-Treatment Plant and to provide better reliable long-term treatment capabilities.

Lower Canyon Treatment Facility. This plant treats contaminated groundwater from extraction wells in *Zone 3* and *Zone 4* for VOCs. Effluent from the Lower Canyon Treatment Facility is piped to, and stored at the Pre-Treatment Plant, than released to the Inland Empire Brine Line. The plant treats and average of about 90,700 gpd (102 afy).

Community Wellhead Treatment System. This plant treats for VOCs and perchlorate in extracted groundwater from two wells in *Zone 4*. Effluent from the treatment system is discharged to Pyrite

⁸ United States Environmental Protection Agency (USEPA). (1990). *Record of Decision: Stringfellow Hazardous Waste Site*. September 30.

Annual Status Report
Stringfellow Contaminant Plume
October 2018

Creek for used for irrigation by local residents. The plant treats and average of about 15,000 gpd (17 afy).

Monitoring and Reporting Program: Currently, 579 wells are actively monitored in Zones 1 through 4 at the Stringfellow site. The number and type of wells monitored in each zone, along with the depth of sampling, is summarized below in Table 1. The groundwater monitoring program is implemented in accordance with the 2001 *Groundwater Monitoring Program Work Plan*⁹ and the 2015 *Final Quality Assurance Project Plan: Routine Groundwater Monitoring and Zone 4 DGI Investigation*¹⁰. In general, new wells are sampled quarterly for two years and then incorporated into the annual sampling schedule.

qualifying storm events which are classified using the following criteria; i) at least 72 hours of dry weather have elapsed since a previous storm event, and ii) a storm event produces sufficient runoff during daylight hours to perform sampling.

DTSC reports on the monitoring and remediation efforts in Annual Groundwater Monitoring Reports, Quarterly/Non-Routine Monitoring Reports, Monthly Operation and Maintenance Reports, Biennial and Annual Groundwater Remedy Effectiveness Evaluation Reports, and other technical memoranda and non-routine reports.

A final *Site-Wide Groundwater and Surface Water Monitoring Plan*¹² was published on July 19, 2016. The plan was created pursuant to section 3.3 of the *Statement of Work, Agreement to Perform Response Action*¹³ between the DTSC and the EPA under CERCLA (Docket No. 09-2014-0003). It outlines a comprehensive protocol for ongoing data collection and analysis of groundwater and surface water samples, including scheduled updates to the plan in five-year intervals.

The Chino Basin Watermaster (Watermaster) collects all relevant groundwater and surface water data from the DTSC's Stringfellow Interface for Data and Documents (SIDD database) on an annual basis as part of its Chino Basin Data Collection effort. These data are periodically used by Watermaster to support its basin management initiatives.

Recent Activity: The following is a summary of recent key activities that have occurred since July 1, 2017:

- On September 8, 2017 DTSC submitted a proposal to USEPA and approved September 15, 2018 to modify extraction wells OW-50A1 and OW-55A located in Zone 1A to complete dewatering of alluvium pursuant to ROD 4. The proposal also included plans to install 17 new nested monitoring wells in the following zones: 1B (OW-111A, OW-111D, OW-111B, OW-112D, OW-112B, OW-113D, OW-113B, OW-114D, and OW-114B), 3 (OW-65D2), and 4 (FC-1015A, FC-1015D, FC-1054A, FC-1054D, FC-1110A, and FC-1213A). At the time of this report, all modifications and installations have been completed.
- The *Final 2016 Annual Groundwater Monitoring and Remedy Effectiveness Evaluation Report*⁷ was submitted to DTSC on November 30, 2017 and concludes that the remedial actions have been successful in meeting the RAOs and the spatial extent of migration of all contaminants of concern in groundwater is not increasing.
- In March 2018, Geo-Logic Associates submitted the *Data Gap Investigation Monitored Natural Attenuation (MNA) January 2017 Sampling Report*⁴. Groundwater samples were collected from

¹² Kleinfelder. (2016). *Final Site-wide Groundwater and Surface Water Monitoring Plan and Sampling and Analysis Plan Stringfellow Superfund Site*. Prepared for California Environmental Protection Agency. July 2016

Annual Status Report
Stringfellow Contaminant Plume
October 2018

16 new and existing Zone 4 wells to evaluate the effectiveness of MNA as a remedial approach. No evaluation of the data was presented in the document.

- The *2017-2018 Annual Surface Water Sampling and Analysis Report*¹⁵ was completed June 2018. The maximum perchlorate concentration at a surface water site from January-March 2018 was 9.8 µg/l.
- On June 15, 2018 Ramboll submitted a technical memorandum¹⁶ proposing a dye tracer study of the Zone 1 barrier system. The study is designed to address the recommendation in the *Fifth Five Year Review Report*¹⁷ for further evaluation of the apparent hydraulic connection under the clay barrier dam and to assess the magnitude of groundwater flow through interconnected bedrock fracture zones beneath said barrier.
- The USEPA is currently engaged in two groundwater and soil investigations, referred to as the Area 1 and Area 2 investigations (see Exhibit 1). The objective of these investigations is to identify additional sources of perchlorate contamination in Pyrite Canyon. Field work for both projects has commenced and the investigation is ongoing.
- The Lower Canyon Treatment Facility and Pretreatment Plant are currently non-operational but can be re-activated if needed. The Pyrite Canyon Treatment Facility and Community Wellhead Treatment System are fully operational and have treated a combined total flow of 23,537,499 gallons of water from site extraction wells.
